General Summary for Tuesday, 11 June, 2024

British Mountain Summary:

Based on forecast chart for noon 11 June, 2024

Staying chilly across the mountains, but a gradual lift of temperature above freezing toward highest tops. Northerly winds fairly light but still a distinct chill in the air. A scattering of brief showers with hail, but a lot of dry weather with very clear air and cloud clearing most tops.

Headline for Brecon Beacons

Chilly breeze. Scattered brief showers forming.

Detailed Forecast for Tuesday, 11 June, 2024

How windy? (On the summits)	Northwest or northerly 15mph, but on western summits for periods 20mph.
Effect of wind on you?	Small; although in the low temperatures will feel particularly cold in the wind.
How wet? (Precipitation and its impact)	Showers Occasional showers, mostly brief, some of hail. Well inland few showers until late morning or midday.
Cloud on the hills?	Very little Rare fragments higher slopes Cambrian range morning.
Chance of cloud free summits?	90%
Sunshine? Air clarity (below cloud)	Patches of bright sunshine, particularly well inland morning. Inland cloud will tend to fill in from about midday Excellent or superb visibility.
How Cold? (at 750m)	4C post dawn; rising marginally near the coast, but elsewhere 6 to 8C by mid-afternoon. Wind chill feeling like -3C early morning, still near freezing in afternoon.
Freezing Level	Above the summits.

Brecon Beacons - Looking Ahead

	Wednesday 12 June	Thursday 13 June
How windy? (On the summits)	Westerly 10 to 15mph or less.	Southerly, 25 to 40mph, strengthening from the west, risk reaching 50mph on higher summits.
Effect of wind on you?	Small	Deteriorating, making walking arduous, considerable buffeting on exposed higher terrain.
How wet? (Precipitation and its impact)	Precipitation unlikely Small chance of an isolated brief shower.	Rain setting in Possibly dry for a few hours, may be all morning in east Wales, but increasing risk of rain moving in from the west, setting in persistently, heavy for several hours.
Cloud on the hills?	Very little Summits extensively cloud free.	Varied, local breaks; lowering in rain Banks of cloud over hills in the morning, but some breaks, best toward east. Cloud base lowering across the hills as rain develops, forming to midslopes, or lower on southern slopes and near west coast.
Chance of cloud free summits?	90%	50% dropping to 10% in rain
Sunshine? Air clarity (below cloud)	Cloud gradually filling in, although in afternoon bright sunshine over Cardigan Bay extends across Cambrian and Preseli ranges, and later further inland. Superb visibility.	Cloud thickening from west to be overcast and dull. Good visibility at first reducing to poor in rain.
How Cold? (at 750m)	4C rising to 7 to 9C, coldest on summits nearest to Cardigan Bay.	5 to 7C. Feeling sub-zero in the wind, near -5C as speeds increase.
Freezing Level	Above the summits but slight frost some upland and lowland valleys at dawn.	Above the summits

Planning Outlook

All mountain areas of Britain from Wednesday, 12 June, 2024

Cold conditions will ease through midweek and winds will drop lighter. Low pressure approaching from the southwest by Thursday will see winds switch south to southeasterly and strengthen to gale force over west coastal mountains. Rain will move in from the west, becoming heavy. An unsettled outlook into the weekend and early next week as low pressure circulates slowly over the British Isles, bringing areas of rain and thundery showers. Wind speed and direction will vary, at times strong easterlies northern Scotland, west to southwesterly for Wales and Pennines. Temperatures will be higher, above freezing to tops, but not especially warm.

Forecast issued at 16:30 on Monday, 10 June, 2024

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2024.
