General Summary for Saturday, 10 May, 2025

British Mountain Summary:

Based on forecast chart for noon 10 May, 2025

Moderate breezes across Scotland. Variable cloud banks in west Scotland with local light showers onto northwest coasts. East Scotland, England, and Wales will be mostly sunny with a patchwork of high cloud building. Feeling warm in afternoon sunlight. Winds increase in England and Wales somewhat as dusk approaches.

Headline for Brecon Beacons

Dry and sunny, feeling warm; patchy high cloud building.

Detailed Forecast for Saturday, 10 May, 2025

How windy? (On the summits)	East to southeasterly 10 to 20mph, variable within this range. Some increase in speed for a time around dusk.
Effect of wind on you?	Fairly small
How wet? (Precipitation and its impact)	No rain
Cloud on the hills?	Not expected
Chance of cloud free summits?	Nearly certain
Sunshine? Air clarity (below cloud)	Strong sunshine, a patchwork of cloud building as the day goes. Some haze at dawn, visibility becoming excellent.
How Cold? (at 750m)	7C from dawn, rising to 13C afternoon.
Freezing Level	Above the summits

Brecon Beacons - Looking Ahead

	Sunday 11 May	Monday 12 May
How windy? (On the summits)	East to southeasterly 15-25mph, chance of increase around dusk.	Southeasterly 15-25mph.
Effect of wind on you?	Comfortable walking starting to be affected in highest winds, blustery on exposed ridges may affect stability.	Fairly small, comfortable walking becoming affected in highest winds.
How wet? (Precipitation and its impact)	Showery outbreaks, risk thunderstorms Bursts of showery rain, locally heavy. May become more frequent in afternoon, increasing risk of heavier downpours and localised thunderstorms, drifting northwestwards into evening.	Frequently raining; risk thunderstorms Frequent bursts of rain, heavy at times. Chance for extended periods afternoon, possibly developing into areas of thunderstorms.
Cloud on the hills?	Little if any until rain Hills mostly clear, an occasional cloud may cap highest tops during an outbreak of rain. Possibly later in the day, banks of cloud more extensively at various levels if rain occurs more widely.	Often shrouding high terrain Summits will stay in cloud most of the day. Cloud base will vary, intermittently shrouding high terrain and occasionally dropping towards middle or lower slopes during rain.
Chance of cloud free summits?	90%	20%
Sunshine? Air clarity (below cloud)	Sun through high cloud early, gradually becoming more shrouded for only glimpses. Some haze; visibility reducing to be poor in rain.	No sun expected. Hazy at first, visibility often poor.
How Cold? (at 750m)	11 to 13C	10 or 11C, little change expected during the day.
Freezing Level	Above the summits	Above the summits

Planning Outlook**All mountain areas of Britain from Sunday, 11 May, 2025**

Low pressure south and west of the British Isles will facilitate bursts of rain, possible thunderstorms, into Wales into early next week, some may reach into northwest England and west Scotland. The continental wind track and high pressure to the east will keep most cloud above the summits, with eastern areas often sunny. Generally settled conditions prevail mid-late week into next weekend as high pressure reestablishes just north of the British Isles. A mix of cloud and sun with light winds, generally easterly though variable. Slight frosts at dawn in sheltered spots, mostly warm by day. Very dry ground conditions, beware high risk of fire.

Forecast issued at 16:25 on Friday, 9 May, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
