General Summary for Thursday, 30 October, 2025

British Mountain Summary:

Based on forecast chart for noon 30 October, 2025

A temporary lull in the wind will give way as later in the day upland gales reach western mountains. Substantially dry, although 'patchy' rain will reach Wales and later in the day SW Scotland and NW England. Higher terrain frozen across the Scottish Highlands.

Headline for Brecon Beacons

Increasingly windy: Upland gales developing. Occasional rain.

Detailed Forecast for Thursday, 30 October, 2025

How windy? (On the summits)	Southerly 20 to soon on western summits 30mph post dawn. Progressively strengthening to 45, perhaps 55mph western summits by mid afternoon.
Effect of wind on you?	Deteriorating as buffeting and wind chill become very considerable. General mobility may become difficult.
How wet? (Precipitation and its impact)	Rain setting in by about midday Dry most or perhaps all morning east Wales, but turning to rain on and off west Wales. Occasional rain through rest of day - negligible rainfall in total east Wales.
Cloud on the hills?	Gradually filling in across the hills; lowest base southern hills Fragments higher slopes, but most tops cloud free most or in east Wales all morning. Deteriorating in rain as cloud fills in across the hills, widely above 200 or 300m south of A40 and Preseli, mostly above 400 or 500m east and mid Wales.
Chance of cloud free summits?	Dropping to 10% afternoon west Wales, and 30% elsewhere
Sunshine? Air clarity (below cloud)	Little or no sun. Excellent visibility but becoming misty in rain.
How Cold? (at 750m)	5C; rising slowly through the day. Will feel as cold as minus 6C in the wind later in day.
Freezing Level	Above the summits.
