General Summary for Friday, 28 November, 2025

British Mountain Summary:

Based on forecast chart for noon 28 November, 2025

Stormy conditions over Scottish mountains, easing only toward dusk; frequent or persistent rain and hill snow, heaviest western mountains. Severe gales high tops England & Wales, squally stormy gusts for a time with heavy bursts of rain. Risk of hail and isolated thunder, mainly western areas.

Headline for Brecon Beacons

Gales, severe at times high tops. Showery bursts with hail.

Detailed Forecast for Friday, 28 November, 2025

How windy? (On the summits)	Southwesterly 35 to 45mph, sudden powerful squalls, gusts toward 60mph.
Effect of wind on you?	Arduous conditions with significant wind chill and buffeting. Particularly gusty as showers move in.
How wet? (Precipitation and its impact)	Showery bursts with hail, chance thunder Frequent showers, concentrated into a band that will move through southeastward morning into middle of day, risk hail and isolated lightning. Then ongoing brief showery bursts.
Cloud on the hills?	Often covering the tops Bases varying, but will often descend onto the tops, and fairly extensive for several hours, particularly as showers move through. Best breaks in the east.
Chance of cloud free summits?	40%
Sunshine? Air clarity (below cloud)	A little sun coming through in west, more common in east away from showers. Visibility sometimes poor due to rain, intermittently good.
How Cold? (at 750m)	3C. Wind chill feeling like -12C.
Freezing Level	Above the tops

All mountain areas of Britain from Saturday, 29 November, 2025

Colder over the weekend with the mountains near or below freezing point, including frost into glens in Scotland by Saturday night. A small scale low on Saturday most likely affects England and Wales bringing rain , upland snow and a core of strong winds for a time. Sunday then mostly dry, bright and cold. Next week, Atlantic lows passing across or just north of Britain will bring frequent rainfall to western mountains together with upland gales. A mix of chilly westerly air and some milder southwesterlies. Freeze-thaw cycles, with periods of fresh snow mostly for Scottish hills, briefly high tops elsewhere.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
