General Summary for Saturday, 1 August, 2026

British Mountain Summary:

Based on forecast chart for noon 1 August, 2026

England and Wales extensively dry with periods of sun and particularly Wales fairly light wind. Increasingly showery northwards across Scotland, although mostly confined to afternoon eastern mountains. Fairly chilly, particularly morning.

Headline for Brecon Beacons

Light wind; extensive sunshine.

Detailed Forecast for Saturday, 1 August, 2026

How windy? (On the summits)	Westerly 10 to locally 15mph.
Effect of wind on you?	Mostly negligible.
How wet? (Precipitation and its impact)	Rain very unlikely
Cloud on the hills?	Little expected Around dawn, some patchy cloud affect some higher western slopes, but will clear by mid morning.
Chance of cloud free summits?	Almost certain by midday
Sunshine? Air clarity (below cloud)	Extensive bright sunshine. Very good becoming excellent or superb visibility.
How Cold? (at 750m)	10C rising to 12 to 16C, warmest eastern hills.
Freezing Level	Above the summits.

All mountain areas of Britain from Sunday, 2 August, 2026

Still a few showers W & NW Highlands on Sunday, and threat of some rain by dusk western mountains. The rain will be ahead of a very complicated weather pattern early next week; areas of rain will drift slowly across central and mainly northern Britain, but the distribution of rain (and associated low cloud) remains very uncertain. Despite some recent rain (mainly in Scotland), away from the W & NW Highlands terrain remains exceptionally dry: 'tinder dry'.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
