### Detailed Forecast for Monday, 10 August, 2026

|                                                   |                                                                                                                                                                                                             |
|---------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b>                | Northwest to northerly 10mph.                                                                                                                                                                               |
| <b>Effect of wind on you?</b>                     | Negligible                                                                                                                                                                                                  |
| <b>How wet?</b><br>(Precipitation and its impact) | <b>Low risk isolated shower at first</b><br>Possibly isolated brief showers west Wales until mid morning. - then dry.                                                                                       |
| <b>Cloud on the hills?</b>                        | <b>Very little, although probably taking a few hours to clear Cambrian range</b><br>Cloud may come and go in morning on tops on Cambrian range, but will clear the summits by midday, perhaps much earlier. |
| <b>Chance of cloud free summits?</b>              | <b>Almost certain by end of morning</b>                                                                                                                                                                     |
| <b>Sunshine?</b><br>Air clarity (below cloud)     | Extensive or unbroken - perhaps through areas of high level cloud.<br>The Cambrian range possibly intermittently cloudy in morning.<br>Excellent or superb visibility.                                      |
| <b>How Cold? (at 750m)</b>                        | 10C, rising to 17C or a little lower slopes nearest Cardigan Bay.                                                                                                                                           |
| <b>Freezing Level</b>                             | Above the summits.                                                                                                                                                                                          |

## Brecon Beacons - Looking Ahead

|                                                   | <b>Tuesday 11 August</b>                                                                         | <b>Wednesday 12 August</b>                              |
|---------------------------------------------------|--------------------------------------------------------------------------------------------------|---------------------------------------------------------|
| <b>How windy? (On the summits)</b>                | Southerly 10 or 15mph.                                                                           | Southerly 10-15mph.                                     |
| <b>Effect of wind on you?</b>                     | <b>Mostly negligible</b>                                                                         | <b>Negligible</b>                                       |
| <b>How wet?</b><br>(Precipitation and its impact) | <b>Rain not expected</b>                                                                         | <b>Rain very unlikely</b>                               |
| <b>Cloud on the hills?</b>                        | <b>Very unlikely</b>                                                                             | <b>Little if any</b>                                    |
| <b>Chance of cloud free summits?</b>              | <b>90%</b>                                                                                       | <b>90%</b>                                              |
| <b>Sunshine?</b><br>Air clarity (below cloud)     | More or less unbroken sunshine.<br>Excellent or superb visibility - haze may develop east Wales. | Extensive sunshine.<br>Good visibility although a haze. |
| <b>How Cold? (at 750m)</b>                        | 14C rising to 23C, although a little less hot southwest Wales.                                   | 15 rising to 25C.                                       |
| <b>Freezing Level</b>                             | Above the summits.                                                                               | Above the summits.                                      |

**Planning Outlook****All mountain areas of Britain from Tuesday, 11 August, 2026**

Chance of bursts of rain, possibly locally thundery on Wednesday NW England northwards, with further occasional rain (and low cloud) later in the week, mainly across the W & NW Highlands.  
The almost completely dry and warm weather will persist elsewhere. Underfoot conditions will remain exceptionally dry.  
There may well be little change in the pattern into next week.

**Forecast issued at 7:29 on Monday, 10 August, 2026**

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
