### General Summary for Tuesday, 11 August, 2026

#### British Mountain Summary:

Based on forecast chart for noon 11 August, 2026

Fine and widely sunny - albeit patches of high thin cloud. In Scotland cloudy at times near west coast, whilst centred on the SE Highlands, persistent low cloud in the morning. Becoming very warm England and Wales.

#### Headline for Brecon Beacons

Dry, warm and sunny.

### Detailed Forecast for Tuesday, 11 August, 2026

|                                                |                                                                                                                                                    |
|------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b>             | Southerly 10 or 15mph.                                                                                                                             |
| <b>Effect of wind on you?</b>                  | Negligible                                                                                                                                         |
| <b>How wet? (Precipitation and its impact)</b> | Rain not expected                                                                                                                                  |
| <b>Cloud on the hills?</b>                     | <b>Very unlikely</b><br>Fog here and there Black Mountains and Radnor areas for a few hours after dawn. Higher areas likely to be above the cloud. |
| <b>Chance of cloud free summits?</b>           | <b>Almost certain</b>                                                                                                                              |
| <b>Sunshine?</b><br>Air clarity (below cloud)  | More or less unbroken sunshine and excellent or superb visibility - locally foggy at first and then a haze east Wales.                             |
| <b>How Cold? (at 750m)</b>                     | 14C rising to 23C, although a little less hot southwest Wales.                                                                                     |
| <b>Freezing Level</b>                          | Above the summits.                                                                                                                                 |

## Brecon Beacons - Looking Ahead

|                                                   | Wednesday 12 August                                     | Thursday 13 August                                                                                    |
|---------------------------------------------------|---------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b>                | Southerly 10-15mph.                                     | Southerly 15mph.                                                                                      |
| <b>Effect of wind on you?</b>                     | <b>Negligible</b>                                       | <b>Mostly negligible</b>                                                                              |
| <b>How wet?</b><br>(Precipitation and its impact) | <b>Rain very unlikely</b>                               | <b>Substantially or completely dry</b><br>Small chance of a burst of rain - perhaps just a few spots. |
| <b>Cloud on the hills?</b>                        | <b>Little if any</b>                                    | <b>Little if any</b>                                                                                  |
| <b>Chance of cloud free summits?</b>              | <b>Almost certain</b>                                   | <b>90%</b>                                                                                            |
| <b>Sunshine?</b><br>Air clarity (below cloud)     | Extensive sunshine.<br>Good visibility although a haze. | Periods of sunshine - sometimes through high level cloud.<br>Hazy.                                    |
| <b>How Cold? (at 750m)</b>                        | 15 rising to 25C.                                       | Reaching an unusually warm 25 to perhaps 28C - the highest temperatures on easternmost summits.       |
| <b>Freezing Level</b>                             | Above the summits.                                      | Above the summits.                                                                                    |

## Planning Outlook

### All mountain areas of Britain from Wednesday, 12 August, 2026

Chance of bursts of rain, possibly locally thundery on Wednesday NW England northwards, with further occasional rain (and low cloud) later in the week, mainly across the W & NW Highlands.

The almost completely dry and warm weather will persist elsewhere - very hot indeed Thursday. Underfoot conditions will remain exceptionally dry.

There may be little change in the pattern into next week - although there is uncertainty in the track of oncoming rain on low cloud at the end of the weekend.

### Forecast issued at 13:18 on Monday, 10 August, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
