General Summary for Monday, 9 November, 2026

British Mountain Summary:
Based on forecast chart for noon 9 November, 2026

Many Scottish mountains sunny, but variable areas of low cloud and low-level fog. Murky conditions more widely Pennines and east Wales. No rainfall generally, but dampness in the air locally. Light wind for most places; increasing easterly breeze for Wales.

Headline for Brecon Beacons

Low cloud and fog east; breezy, strengthening.

Detailed Forecast for Monday, 9 November, 2026

How windy? (On the summits)	East-southeasterly 20mph from dawn, rising during day to 25-30mph and increasingly gusty; stronger after dark.
Effect of wind on you?	**Increasingly noticeable and starting to affect comfortable walking over exposed terrain; marked wind chill developing.**
How wet? (Precipitation and its impact)	**No rain expected** Locally feeling damp where in fog.
Cloud on the hills?	**Low cloud fairly widely, breaks west** Cloud likely covering most high eastern terrain all day, some lower fog banks early morning. Better breaks toward western slopes, some tops may emerge out of cloud or between banks. Westernmost hills more likely generally clear.
Chance of cloud free summits?	**20%, to local 80% furthest west.**
Sunshine? Air clarity (below cloud)	Mostly sunny west Wales, very good visibility; a veil of high cloud tending to thicken from the south. Hazy or foggy eastern areas.
How Cold? (at 750m)	4 or 5C, slight rise toward west. As wind increases, feeling below freezing, later nearer -5C on exposed tops.
Freezing Level	Above the summits. Local frost pockets in sheltered valleys around dawn.

Brecon Beacons - Looking Ahead

	Tuesday 10 November	Wednesday 11 November
How windy? (On the summits) **Effect of wind on you?**	Southeasterly 25 to 35mph, gusty in places around major summits and some western downslopes. **Strenuous walking in exposure, gusty areas making balance difficult at times. Considerable wind chill.**	Easterly 20 to 25mph, at times 30mph and gusty around higher tops, locally downslope to west; tending to lessen. **Starting to affect comfortable walking over higher exposed terrain, though may improve. Marked wind chill.**
How wet? (Precipitation and its impact)	**Rain becomes fairly persistent** Dry at first, but rain likely to develop from south to affect much of the region throughout the day, with time steadier or heavier falls particularly south and eastern areas, mixed with drizzly moments.	**Constant rain becoming light and patchy** An area of persistent rain from overnight continues into the daytime, some heavier falls into the morning, but tending to ease and gradually break up, though patchy rain and drizzle likely lingers most of day.
Cloud on the hills? **Chance of cloud free summits?**	**Extensive** Shrouding the hills likely all day, lowest cloud bases on southern and eastern slopes, may fill in to lower slopes at times. Higher bases to 500-600m in west, local breaks west mid-Wales if drier. **10%**	**Extensive** Shrouding most hills throughout the day, from some lower elevations up in the south and east of the region. Some breaks emerging mainly western areas into afternoon. **20%**
Sunshine? Air clarity (below cloud)	Overcast and dull, poor visibility fairly widely, but locally brighter toward Cardigan Bay.	Overcast and dull, murky in rain. Some local improvement in visibility if rain fades, mainly in west.
How Cold? (at 750m) **Freezing Level**	6C. Feeling like -5C directly in the wind. Above the summits.	3C. Feeling like -4 to -7C directly in the stronger wind. Above the summits.

Planning Outlook

All mountain areas of Britain from Tuesday, 10 November, 2026

Generally dry much of the week ahead in Scotland. Some variable cloud and fog early in the week. A gusty easterly wind for England & Wales and rain pushes into Wales on Tuesday, reaching the south Pennines with time, persisting into Wednesday in these areas, but very little extending further north. Into the second half of the week, a switch to a colder northerly flow will likely drop the freezing level to 800 m increasingly widely for Thursday-Friday, plus frost on low ground. Some snow showers on northern Scottish mountains, but largely dry weather elsewhere. During next weekend, a shift to a less cold Atlantic influence - a changeable mix likely into the following week.

Forecast issued at 15:00 on Sunday, 8 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
