General Summary for Wednesday, 11 November, 2026

British Mountain Summary:
Based on forecast chart for noon 11 November, 2026

Many places stay dry all day with sunshine and broken cloud. Below freezing on Scottish tops. A band of rain and hill snow moves into northern Scotland during the day, plus a strengthening northwesterly wind. Easterly winds for Wales, light rain in the south fizzles out, but leaves low cloud and dampness.

Headline for Brecon Beacons

Strong gusty wind, early rain fading, staying cloudy.

Detailed Forecast for Wednesday, 11 November, 2026

How windy? (On the summits)	Easterly 25 to 30mph, gusty 35mph around higher tops during the morning; locally gusty downslope to west; tending to lessen slightly into afternoon.
Effect of wind on you?	**Affecting comfortable walking over higher exposed terrain, gusts making balance tricky in the morning; improving a little. Marked wind chill.**
How wet? (Precipitation and its impact)	**Rain mostly light, fading to patchy drizzle** An area of persistent rain and drizzle from overnight continues into the morning, but will fade and gradually break up. Some patchy drizzle likely lingers most of day toward southeastern hills.
Cloud on the hills?	**Most persistent eastern areas** Shrouding most hills in the morning, from some lower elevations up in the east of the region, but higher and more broken westwards. Some breaks emerge during day, but eastern hills often covered.
Chance of cloud free summits?	**20% east, rising to 60% west.**
Sunshine? Air clarity (below cloud)	Overcast and dull, murky in early rain. Some improvement in visibility as rain fades, locally good in west.
How Cold? (at 750m)	3 or 4C. Feeling like -4 to -7C directly in the stronger wind.
Freezing Level	Above the summits.

Brecon Beacons - Looking Ahead

	Thursday 12 November	Friday 13 November
How windy? (On the summits)	Northerly 20 to 30mph.	Northerly turning northwesterly, 15mph or likely dropping less during the day.
Effect of wind on you?	**Affecting comfortable walking on exposed high terrain, gusts may affect balance. Considerable wind chill.**	**Mostly small.**
How wet? (Precipitation and its impact)	**No precipitation expected most places** Chance of an odd shower over Pembrokeshire.	**Precipitation not expected**
Cloud on the hills?	**Little if any** Some cloud may drift over higher slopes from dawn, but all likely to break up.	**None expected**
Chance of cloud free summits?	**90%**	**Above 90%**
Sunshine? Air clarity (below cloud)	Early patchy cloud clears, then widely sunny. Visibility excellent.	Extensive sunshine. Visibility excellent.
How Cold? (at 750m)	Around 0C. Feeling near -10C directly in the wind.	Around 0C.
Freezing Level	800m or just above. Patchy frost in valleys in morning.	Around 800m or just above, but frost widely in valleys in morning, in places all day inland out of sunlight.

Planning Outlook

All mountain areas of Britain from Thursday, 12 November, 2026

Chillier in the second half of this week with frost widely, but much clearer conditions for all with sunshine. Into the weekend, as the wind shifts west then southwesterly, less cold air drifts in from the Atlantic bringing more cloud onto western hills - some rain mainly in western Scotland, whilst England and Wales may remain largely dry for the weekend. A changeable outlook into next week with varying temperatures, stronger wind at times, rain and some upland snow possible. Unsettled patterns are more likely to prevail beyond mid-month.

Forecast issued at 15:25 on Tuesday, 10 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
