General Summary for Saturday, 21 November, 2026

British Mountain Summary:
Based on forecast chart for noon 21 November, 2026

Fine, cold and light wind most areas. Bright sunshine widely but the ground frozen or partly frozen. Less cold with cloud coming and going Wales, and also cloudy for periods southern Scotland and Cumbria with chance of a little light precipitation.

Headline for Brecon Beacons

Terrain frozen or partly frozen. Dry, blustery later in day - mainly SW.

Detailed Forecast for Saturday, 21 November, 2026

How windy? (On the summits)	South or southeasterly, rising from 10mph at first to 20-25mph afternoon when sudden gusts in places. Strongest wind west Wales, particularly Preseli.
Effect of wind on you?	**Fairly small.**
How wet? (Precipitation and its impact)	**Precipitation very unlikely** Very low risk of a little light rain briefly west Wales.
Cloud on the hills?	**Little if any** Chance fog here and there higher slopes- in places persisting whilst nearby hills clear of fog.
Chance of cloud free summits?	**Greater than 90%**
Sunshine? Air clarity (below cloud)	Often sunny, though large banks of cloud drifting about. Hazy with patchy fog lower slopes and valleys, particularly east Wales; visibility excellent higher up.
How Cold? (at 750m)	4C.
Freezing Level	Above the summits but frost many valleys in the morning.

Brecon Beacons - Looking Ahead

	Sunday 22 November	Monday 23 November
How windy? (On the summits)	Easterly 30 to 45mph, locally very gusty, sometimes on lower slopes. Perhaps locally 50mph.	Southeasterly 20 to 30mph, strongest west Wales.
Effect of wind on you?	**Considerable wind chill and sometimes abruptly gusty winds will make walking and particularly balance difficult; sometimes on lower slopes.**	**Fairly small, particularly east Wales, but higher up marked wind chill and significant buffeting elsewhere.**
How wet? (Precipitation and its impact)	**Rin, probably focussed SW Wales** A band of rain is highly likely to cover SW Wales. Patches may reach much of south and mid Wales, but little if any north rom Black Mountains and mid Wales.	**Risk rain spreading inland** A band of rain will probably spread in from west, but perhaps only later in day timing very uncertain.
Cloud on the hills?	**May be very extensive** Confidence very low: In rain fog may well envelop hills persistently, forming in some areas at or below 300m. Where dry cloud base higher, particularly western summits, little if any low cloud.	**Very little before becoming extensive in rain** Most likely no more than patches above 700m. However, should rain envelop the region, then fog likely to become very extensive.
Chance of cloud free summits?	**40%**	**40%**
Sunshine? Air clarity (below cloud)	Cloudy and hazy. Widely dull and misty SW Wales	Probably little or no sunshine. Hazy, particularly east Wales.
How Cold? (at 750m)	4C. Will feel as cold as minus 8C directly in the wind.	3C. Will feel as cold as minus 5C in the wind.
Freezing Level	Above the summits.	Above the summits.

Planning Outlook

All mountain areas of Britain from Sunday, 22 November, 2026

Extensively dry and cold conditions will tend to be eroded away from the west only slowly early next week as high pressure to the east gives way only slowly. Rain, or on higher areas, particularly Scotland, snow, will occasionally make inroads into Wales on Sunday and Monday before the precipitation, together with strong winds progresses across the country. Further bands of precipitation will follow, together with areas of upland gale and low cloud. All in all temperature levels remaining below normal.

Forecast issued at 12:28 on Friday, 20 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
