General Summary for Monday, 10 May, 2021

British Mountain Summary:

Based on forecast chart for noon 10 May, 2021

Many areas dry from dawn, but patches of rain affecting some western hills, mainly near coast. Showers will develop more widely from mid morning with some torrential downpours forming in the afternoon with the risk of hail and thunder. Banks of hill fog in and around showers. Risk gales highest tops in Wales.

Headline for Cairngorms NP and Monadhliath

Mostly dry start, but showers developing; local downpours PM with thunder.

Detailed Forecast for Monday, 10 May, 2021

How windy? (On the Munros)	Southeast, later southerly; 15-20mph or sometimes less. May reach 25-30mph later in day.
Effect of wind on you?	Mostly small, but expect sudden gusts during or prior to heavy showers.
How wet? (Precipitation and its impact)	Downpours forming; hail, risk lightning A few hours mainly dry from dawn, but bursts of rain developing increasingly, spreading from south, may set in for an hour or more in places. Locally torrential bursts with hail. Risk of thunder.
Cloud on the hills?	Most extensive around showers Varied cloud bases, sometimes clearing most summits, best north of the Cairngorms away from showers. Banks of cloud at times above 800m and forming below 600m in showers.
Chance of cloud free Munros?	40%
Sunshine? Air clarity (below cloud)	Occasional sun, mainly morning. Visibility often very good, but suddenly very poor in rain.
How Cold? (at 900m)	3C, locally 5C north of the Cairngorms.
Freezing Level	Above the summits

Cairngorms NP and Monadhliath - Looking Ahead

	Tuesday 11 May	Wednesday 12 May
How windy? (On the Munros)	Southerly/southeasterly; 25 to 35mph from dawn, easing to 10-15mph by afternoon.	Easterly 15 to 25mph; strongest in morning when risk of 30mph tops.
Effect of wind on you?	Will impede walking for a few hours from dawn with some buffeting, but then becoming small.	Will impede walking at times across higher slopes with some local buffeting.
How wet? (Precipitation and its impact)	Risk showers, but may be mostly dry. Perhaps for much of the day, hills mostly dry. However, risk of a few showers; mostly both early and late in the day.	Clusters of showers, risk thunder PM. Clusters of showers through the day; may merge to give prolonged rain for a few hours. By afternoon risk of some heavy pulses with hail and thunder.
Cloud on the hills?	Often confined to high tops or above. Hills are likely to be often clear through the day, aside from occasional patches on higher tops. In and around showers, hill fog perhaps forming more widely.	Fairly extensive higher tops. Varying in and out of showers; will often cover higher tops with bases fluctuating around 900-1200m, but patches lowering in showers to 600m or below.
Chance of cloud free Munros?	70%	30%
Sunshine? Air clarity (below cloud)	Occasional sun, but cloud often filling in. Visibility very good, but poor in any showers.	Fairly cloudy, but occasional bursts of sun here and there. Visibility at times very good, but often suppressed due to rain.
How Cold? (at 900m)	3C lifting to 6C by the afternoon.	3 to 5C; coldest in morning.
Freezing Level	1200m at first, but soon lifting above the tops.	Close to highest tops in morning, otherwise above summits.

Planning Outlook**All mountain areas of Britain from Tuesday, 11 May, 2021**

Low pressure situated to the west of Britain brings unsettled and showery conditions next week, some heavy downpours with hail and thunder. Varied winds. Generally milder than recently; only close to freezing point on highest Scottish summits, a thaw of lying snow, becoming confined to patches on high tops. Northernmost mountains may drop colder after midweek if a northeasterly wind strengthens. Toward next weekend, high pressure building toward the north is likely to bring drier conditions for a time to west & northern Scotland; uncertainty about extent of improvement elsewhere.

Forecast issued at 15:17 on Sunday, 9 May, 2021

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2021.
