General Summary for Wednesday, 12 November, 2025

British Mountain Summary:

Based on forecast chart for noon 12 November, 2025

Northern areas of the Highlands generally wet, the rain only gradually breaking up. Showers for the southwest Highlands. Dropping below freezing on northern tops later. Heavy rain sets in again across Wales, already flooding expected after previous rain. Mostly dry for much of Pennines, Lakes & south Scotland.

Headline for Cairngorms NP and Monadhliath

Strongest wind in morning. Often raining, in places heavy.

Detailed Forecast for Wednesday, 12 November, 2025

How windy? (On the Munros)	Southwesterly 20-35mph in morning, tending to ease and become more variable, a possible lull to low speeds into afternoon. By evening, quickly switching northeasterly, into night 40-50mph+.
Effect of wind on you?	Blustery conditions, marked wind chill in morning, becoming smaller afternoon. Deteriorating after dark.
How wet? (Precipitation and its impact)	Rain most of the day, sometimes heavy Previous rain leaving wet ground and fast-flowing streams. Rain frequent during daytime, some persistent heavier falls at times especially toward north, showery at times further south, but risk more persistent rain moving back southwards in afternoon.
Cloud on the hills?	Fairly extensive Shrouding the mountains widely, banks of cloud at varied elevations, in places to some lower slopes. Higher bases and local breaks toward Deeside.
Chance of cloud free Munros?	20%
Sunshine? Air clarity (below cloud)	Overcast, dull with poor visibility in rain. Some brighter areas possible with local good visibility, but expect lingering areas of mist.
How Cold? (at 900m)	3 or 4C, a slight drop on the northern slopes later, then to 0C into night. Feeling like -5C if in stronger wind.
Freezing Level	Above the summits, but tending to lower onto highest tops around dusk, lowering widely to 800m into night.

All mountain areas of Britain from Thursday, 13 November, 2025

High rainfall totals bring concerns for flooding again, risk more significant in Wales in the days ahead. A marked contrast of temperature north to south this week, but colder air to the north becomes more widespread into the weekend and early next week, leaving higher terrain below freezing for a run of days and some accumulating snow, mostly focused over northern Scottish mountains. Wind will vary, then become east-northeasterlies, gales Friday into Saturday, then a possible brief lull before turning northerly on Sunday. More uncertain outlook further into next week, but some further unsettled areas of low pressure currently show signs of remaining nearby - but often within a colder weather regime.

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
