## Lake District - Looking Ahead

Thursday 14 November	Friday 15 November
High uncertainty in forecast: Variable, mostly northeasterly, varying from 10 to 25mph.  Mostly small.	Southwesterly, strengthening from 25mph to 40mph during the afternoon.  Firstly moderate, walking becoming arduous and balance hard to keep on exposed ridges, chilly in the wind.
No rain expected	Showers south west
·	Scattered showers, most likely southern Lakes near the coast (Black Combe, Scafell).
Variable	Extensive, breaks north
Morning cloud mostly covering the hills from mid slopes upward, frequent breaks afternoon. South of Dunmail Raise likely clear first half of the day, but very low slopes may be covered by fog.	Cloud covering higher tops all day, lower slopes may clear at times but likely in cloud most of the day. Occasional breaks north Lakes.
50%	30%
Cloudy, sun rare in the north Lakes, longer sunny spells most likely toward the south. Good visibility.	Overcast with low chance for any sun.  Mostly poor visibility.
4 or 5C	5 to 7C
Above the summits.	Above the summits.
	mostly northeasterly, varying from 10 to 25mph.  Mostly small.  No rain expected  Variable  Morning cloud mostly covering the hills from mid slopes upward, frequent breaks afternoon. South of Dunmail Raise likely clear first half of the day, but very low slopes may be covered by fog.  50%  Cloudy, sun rare in the north Lakes, longer sunny spells most likely toward the south. Good visibility.

## **Planning Outlook**

## All mountain areas of Britain from Thursday, 14 November, 2024

High pressure lasting until Friday, ending with a cold front coming from the northwest, what marks the end of fairly dry and mild period. On Saturday, the front will pass over Britain, reaching central England by the end of the day. bringing some rain to most hilly areas. Drastic cooling and big pressure drop behind the front. On Sunday and start of next week, in low pressure, frequent showers are expected, with snow on the hills, snowflakes even down to valleys and towns. In the Highlands snow may reach significant depths rapidly, meaning truly winter conditions fairly early in the season.

## Forecast issued at 16:30 on Tuesday, 12 November, 2024

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2024.
