Freezing Level	Above the summits	Above the summits

Planning Outlook**All mountain areas of Britain from Sunday, 11 May, 2025**

Low pressure south and west of the British Isles will facilitate bursts of rain, possible thunderstorms, into Wales into early next week, some may reach into northwest England and west Scotland. The continental wind track and high pressure to the east will keep most cloud above the summits, with eastern areas often sunny. Generally settled conditions prevail mid-late week into next weekend as high pressure reestablishes just north of the British Isles. A mix of cloud and sun with light winds, generally easterly though variable. Slight frosts at dawn in sheltered spots, mostly warm by day. Very dry ground conditions, beware high risk of fire.

Forecast issued at 16:25 on Friday, 9 May, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
