Planning Outlook

All mountain areas of Britain from Monday, 12 May, 2025

Lingering bursts of rain in Wales early next week will gradually fade as low pressure slips away. Only odd spots of rain in northwest England and west Scotland, soon fading. A continental wind track and high pressure to the east will keep most cloud above the summits next week, with eastern areas often sunny. Settled conditions prevail midweek into next weekend as high pressure reestablishes just north of the British Isles. A mix of cloud and sun with light winds, generally easterly though variable with little change day to day. Slight frosts at dawn in sheltered spots, mostly warm by day. Very dry ground conditions, beware high risk of fire.

Forecast issued at 16:23 on Saturday, 10 May, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
