### Headline for Lake District

Gales, severe high tops. Showery bursts with hail.

## Detailed Forecast for Friday, 28 November, 2025

|                                                   |                                                                                                                                                                                                                                                   |
|---------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b>                | Southwesterly 40 to 55mph, gusts at times over 60mph on high tops.                                                                                                                                                                                |
| <b>Effect of wind on you?</b>                     | <b>Difficult walking conditions, with significant wind chill and buffeting. Powerful gusts into some valleys.</b>                                                                                                                                 |
| <b>How wet?</b><br>(Precipitation and its impact) | <b>Showery bursts with hail, chance thunder</b><br>Showers frequent, sleet on high tops, but concentrated into a heavier band that will move through most likely in morning, risk hail and isolated lightning. Then ongoing brief showery bursts. |
| <b>Cloud on the hills?</b>                        | <b>Often covering the tops</b><br>Bases varying, but will often descend onto the tops, and may well be extensive for several hours, particularly as showers move through.                                                                         |
| <b>Chance of cloud free summits?</b>              | <b>30%</b>                                                                                                                                                                                                                                        |
| <b>Sunshine?</b><br>Air clarity (below cloud)     | A little sun coming through, but often cloudy. Visibility sometimes poor due to rain, intermittently very good, though some haze near coast.                                                                                                      |
| <b>How Cold? (at 750m)</b>                        | 2C.<br>Wind chill feeling like -15C.                                                                                                                                                                                                              |
| <b>Freezing Level</b>                             | Just above highest summits                                                                                                                                                                                                                        |

**All mountain areas of Britain from Saturday, 29 November, 2025**

Colder over the weekend with the mountains near or below freezing point, including frost into glens in Scotland by Saturday night. A small scale low on Saturday most likely affects England and Wales bringing rain , upland snow and a core of strong winds for a time. Sunday then mostly dry, bright and cold. Next week, Atlantic lows passing across or just north of Britain will bring frequent rainfall to western mountains together with upland gales. A mix of chilly westerly air and some milder southwesterlies. Freeze-thaw cycles, with periods of fresh snow mostly for Scottish hills, briefly high tops elsewhere.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
