

Peak District

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

Alpkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.

General Summary for Tuesday, 23 February, 2021

British Mountain Summary:

Based on forecast chart for noon 23 February, 2021

Active fronts edging east across Britain will bring widespread severe conditions: Storm force upland winds and incessantly heavy rain (initially snow Scottish Highlands) to most western mountains. Conditions a little less severe E/S Wales and S Pennines, where little rain but gales still severe.

Headline for Peak District

Severe gale force upland winds. Risk of rain afternoon.

Detailed Forecast for Tuesday, 23 February, 2021

| | |
|---|---|
| How windy? (On the summits) | Southerly, 40 or 45mph, but on highest tops 55mph. |
| Effect of wind on you? | Rapid increase of speed with height will make walking difficult where exposed on higher terrain. Significant wind chill. |
| How wet? (Precipitation and its impact) | Substantially or completely dry Rain over the Irish Sea will edge toward the region. By mid afternoon, patches may well have reached western areas north of M62, but little if any elsewhere before dusk. |
| Cloud on the hills? | Little if any |
| Chance of cloud free summits? | Greater than 90% |
| Sunshine? Air clarity (below cloud) | Patches of sun, although fairly extensive high level cloud. Visibility excellent. |
| Temperature (at 600m) | 4C rising to 7C. Will feel as cold as minus 8 Celsius directly in the wind. |
| And in the valleys | 13 to 15C in the afternoon. |

Peak District - Looking Ahead

| | Wednesday 24 February | Thursday 25 February |
|---|---|--|
| How windy? (On the summits) | South or southwesterly 45mph. | Southwest to westerly 20mph but perhaps at times 25mph highest tops. |
| Effect of wind on you? | Quickly increasing wind speed with height will make walking widely difficult where exposed on higher areas and wind chill significant. | Fairly small |
| How wet? (Precipitation and its impact) | Threat rain afternoon Rain on and off as an almost stationary front lies close to the region. However, the rain may only occasionally extend as far as the southern and eastern Peak District. | Isolated showers Small risk of the odd brief shower. |
| Cloud on the hills? | May spread southeast later in day Some hills in the Peak District, particularly toward Derbyshire could be largely cloud free. However, more widely cloud likely to be persistent above 300 to 450m. | All clearing Cloud covering higher summits after dawn will almost all clear the summits by late morning. |
| Chance of cloud free summits? | 40% | 80% |
| Sunshine? Air clarity (below cloud) | Sunshine may come through at times, most likely south and eastern Peak District. Very good visibility. | Patchwork of sunshine. Excellent visibility. |
| Temperature (at 600m) | 9C | 3C |
| And in the valleys | 12C to perhaps 14C Derbyshire. | Will rise to 9 to 11C early afternoon, warmest eastern dales. |

Planning Outlook**All mountain areas of Britain from Wednesday, 24 February, 2021**

Very much drier later this week as pressure rises markedly, initially across southern Britain. Fronts may bring occasional rain, mainly to the NW highlands (where also windy) until the weekend, but then all areas will probably become dry - and the wind dropping. Temperature wise, the Scottish Munros frequently sub-freezing, but summits elsewhere mostly above freezing point.

Forecast issued at 14:50 on Monday, 22 February, 2021

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2021.
