

Peak District

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

Alpkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.

General Summary for Tuesday, 9 September, 2025

British Mountain Summary:

Based on forecast chart for noon 9 September, 2025

Windy near west coasts of Scotland and Wales, risk of gales over high tops later in the day; local cloud and light morning rain, then dry and largely clear. Some morning light rain and cloud for Lakeland too, also clearing. Mostly clear hills east Scotland though blustery. Mostly sunny and warm along the Pennines.

Headline for Peak District

Largely sunny and feeling warm; becoming breezy after dark

Detailed Forecast for Tuesday, 9 September, 2025

How windy? (On the summits) Effect of wind on you?	Southerly 15-20mph, southwesterly for a few hours around dawn. Strengthening around evening and into nighttime towards 25mph, occasionally stronger breezes over high moors. Fairly small during daylight, increasingly uncomfortable overnight.
How wet? (Precipitation and its impact)	Likely dry Small chance of local afternoon showers - if any, amounting to little.
Cloud on the hills? Chance of cloud free summits?	Soon cloud-free From dawn, patchy mist in sheltered valleys with odd cloud patches at higher elevations. Fog will break and lift for cloud-free moors. Rising to above 90%
Sunshine? Air clarity (below cloud)	Extensive sunshine well into the day. Fair weather cloud building later. Very good visibility though some haze around, notably early.
Temperature (at 600m) And in the valleys	9C rising to 13 or 14C. 8C from dawn, rising to 18C; feeling very warm in valleys sheltered from wind.

Peak District - Looking Ahead

	Wednesday 10 September	Thursday 11 September
How windy? (On the summits) Effect of wind on you?	Southerly 25-30mph, occasionally up to 35mph over high tops. May shift SW'ly late in the day. Comfort of walking affected, stability challenged at times in exposure. Feeling cool.	Southwesterly 25-35mph. Walking becoming impeded, strenuous at times where exposed to strongest wind. Feeling cool.
How wet? (Precipitation and its impact)	Afternoon showery rain Odd spots of rain here and there in the morning. Showery rain on-and-off increases through afternoon into evening with a risk of heavy bursts.	Showers, at times heavy Increasingly showery across most areas through midday and afternoon. Showers at times set in more frequently and heavier with risk of hail and thundery bursts.
Cloud on the hills? Chance of cloud free summits?	Often clear early, deteriorating with rain Many hills clear for several hours in the morning - variable banks may come and go over high ground. Patches rising in number and extent as rain arrives, increasingly extensive with infrequent breaks off tops. 70%, lowering to 30%	Often clear, some banks on high ground Patchy cloud on high tops at dawn, some lower patches on western hills. Largely breaking off tops, though patches return during showers, risk fairly extensive on high ground during heavy showers. 60%
Sunshine? Air clarity (below cloud)	Some glimpses of sun in the morning soon shrouded by high cloud. Good visibility, deteriorating during periods of rain; some haze east.	Patchy sunshine and fair weather cloud - may be largely cloudy at times. Very good visibility away from rain.
Temperature (at 600m) And in the valleys	10C rising to 12C. Feeling just above freezing in strongest wind. 9 or 10C from dawn, rising to 16C.	8 to 9C. Feeling like 0 to 2C where directly exposed to wind. 9C from dawn, rising to 15C.

Planning Outlook

All mountain areas of Britain from Wednesday, 10 September, 2025

Low pressure over the north Atlantic dominates the weather pattern for the week ahead, maintaining unsettled conditions. West to southwesterly winds prevail bringing frequent rain and cloud to western areas, regularly becoming more widespread as weather features come and go. Breaks may form with some bursts of sunshine, though likely short lived. Early indications suggest a deeper area of low pressure late weekend and early next week will bring widespread gales, possibly severe on highest terrain. Becoming more mixed after mid-month with longer periods of dry weather, but a persistent southwesterly regime will continue to draw unsettled spells of weather into Britain, notably in the north.

Forecast issued at 16:13 on Monday, 8 September, 2025
