

Peak District

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

Alpkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.

General Summary for Sunday, 9 November, 2025

British Mountain Summary:

Based on forecast chart for noon 9 November, 2025

A swathe of rain advances eastwards across all regions during the day, heaviest over south-facing hill groups, patchier northwards across the Highlands, breaking up with time in the west, leaving a few showers, rising cloud bases. Windy, up to gale force high tops, most sustained in Wales.

Headline for Peak District

Wind strengthening, rain moving in, heavy at times.

Detailed Forecast for Sunday, 9 November, 2025

How windy? (On the summits)	Southwesterly 25-30mph. Rising into middle of day, reaching up to 35mph onward through afternoon, some stronger gusts over tops and near higher edges.
Effect of wind on you?	Walking increasingly arduous with wind chill. Considerable buffeting will make stability challenging.
How wet? (Precipitation and its impact)	Rain persistent into afternoon, some heavy bursts Largely dry in the morning. Patchy rain approaching from the west, becoming persistent, sometimes heavy onward into early afternoon in west, more widely with time during afternoon hours.
Cloud on the hills?	Becoming extensive over high terrain From dawn, banks of cloud drifting over high moors but local breaks are likely. Into afternoon, banks become more frequent and bases will lower to middle slopes as rain arrives.
Chance of cloud free summits?	70%, lowering to 20%
Sunshine? Air clarity (below cloud)	Sun through high cloud early, trending overcast by late morning into afternoon. Very good visibility, becoming poor as rain arrives.
Temperature (at 600m)	8 or 9C. Feeling below freezing in direct strongest wind.
And in the valleys	7C from dawn, rising to 12C.

Peak District - Looking Ahead

	Monday 10 November	Tuesday 11 November
How windy? (On the summits)	South-southwesterly 10-15mph.	Southerly, strengthening rapidly from before dawn to 35 to 45mph in morning, reaching 50mph at times high tops.
Effect of wind on you?	Small	Soon arduous walking conditions, difficult in places on higher exposed terrain, very gusty near edges.
How wet? (Precipitation and its impact)	Soon dry Showery rain from dawn soon clears, wet underfoot at first. A dry day follows.	Rain at times persistent Periods of steady rain, most likely in the morning, then staying drizzly, especially in western areas, some further pulses of rain at times.
Cloud on the hills?	Mostly high tops Fog fairly extensive on high terrain at and before dawn. Cloud will tend to lift as morning rain clears away, though banks may cling to high tops for extended periods.	Extensive higher areas Shrouding hills widely above 500-600m, at times lower in rain especially more west and southwestern areas.
Chance of cloud free summits?	50%	20%
Sunshine? Air clarity (below cloud)	A mix of cloud and sun, at times more often cloudy. Excellent visibility.	Overcast and dull, murky in rain.
Temperature (at 600m)	8C	6C rising in morning to 8C, reaching 10C from dawn; only small fall with height. Feeling below freezing directly in wind.
And in the valleys	9C at dawn, rising to 11 or 12C.	8C at dawn, rising to 12C afternoon, staying mild with little change into evening and night.

Planning Outlook

All mountain areas of Britain from Monday, 10 November, 2025

A cloudy and wet week ahead as several low pressure cores draw frontal systems across the British Isles. Rain at times extensive and heavy, streams in spate with a risk of flooding, primarily western mountains. Winds start fairly light but soon increase with gales becoming widespread by Tuesday, which may persist for several days. Temperatures remain mild until later in the week when cold air begins pushing into northern Scotland - timing and extent of the arrival of cold air remains uncertain but high terrain of Scotland and possibly northern England may start to see more snow around or after next weekend.

Forecast issued at 16:30 on Saturday, 8 November, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
