

Peak District

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

Alpkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.

General Summary for Tuesday, 16 December, 2025

British Mountain Summary:

Based on forecast chart for noon 16 December, 2025

Showery in western Scotland, with hail, snow on higher mountains; fewer showers eastwards, more sun and higher cloud breaks. Strongest winds in NW Highlands, up to gale force tops. England and Wales largely dry and bright, patchy cloud western tops.

Headline for Peak District

Light-moderate breeze. Dry with sun, high cloud clears.

Detailed Forecast for Tuesday, 16 December, 2025

How windy? (On the summits)	West to northwesterly 10 to 20mph, least wind typically afternoon. Starting to strengthen onward into night, well beyond midnight over 30mph.
Effect of wind on you?	Fairly small. Deteriorating into night.
How wet? (Precipitation and its impact)	Likely dry all daytime Remnants of overnight rain may linger up to dawn in east, but fading and clearing eastwards, leaving a dry day. Wet underfoot following previous rain, fast-flowing streams.
Cloud on the hills?	Likely to clear Some cloud banks over higher moors at first, but likely to thin and break up to leave the hills clear.
Chance of cloud free summits?	80%
Sunshine? Air clarity (below cloud)	Early cloudy skies, high cloud tending to thin to reveal some sun, soonest in west. Visibility increasingly excellent.
Temperature (at 600m)	4C. Feeling like -2C directly in the breeze.
And in the valleys	5C or perhaps locally cooler in west at dawn, rising to max 7 or 8C.

All mountain areas of Britain from Wednesday, 17 December, 2025

An unsettled southwesterly weather pattern continues mid-late this week. On Wednesday, another system sweeps in from the Atlantic bringing further rain and gales. Showery conditions then persist in western Scotland, with hail and snow on high tops. Scottish mountains often near or below freezing above 900m, only brief thawing higher up. Meanwhile, England and Wales stay mild midweek with more heavy rain likely into Thursday, then lowering to freezing on high tops for periods from Friday. A change of weather pattern is likely in the run up to Christmas, as high pressure builds northward, bringing drier weather, fog and frost more common.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
