

Peak District

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

Alkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.

General Summary for Monday, 26 January, 2026

British Mountain Summary:

Based on forecast chart for noon 26 January, 2026

Gale-force and very gusty southeasterly winds Scottish mountains, tending to strengthen. Patchy snow and low cloud affects the eastern Highlands; largely dry and clearer toward west/northwest. Some cloud breaks for the Lakes. Rain and upland gales moves into Wales from the west in the afternoon.

Headline for Peak District

Windy. Low cloud, but little if any precipitation.

Detailed Forecast for Monday, 26 January, 2026

How windy? (On the summits)	East-southeasterly 25-35mph. Strongest wind later in the day, strengthening further evening after dark, 40mph higher hills.
Effect of wind on you?	Walking will be increasingly strenuous in exposure, buffeting gusts later will challenge balance. Significant wind chill.
How wet? (Precipitation and its impact)	Damp air Drizzle where in cloud, rare spots of light rain or snow grains, amounting to little. Rain and upland snow develops onward into evening and night.
Cloud on the hills?	Fairly extensive A sheet of cloud shrouds the moors down to the middle or lower eastern slopes. Best chance of higher breaks in the Lancashire Pennines, possibly near summits but only briefly.
Chance of cloud free summits?	20%
Sunshine? Air clarity (below cloud)	Bright skies possible on low western slopes early but soon overcast. Cloud and haze will limit visibility.
Temperature (at 600m)	-1C. Feeling like -10C in exposure to direct wind.
And in the valleys	2 to 4C.

Peak District - Looking Ahead

	Tuesday 27 January	Wednesday 28 January
How windy? (On the summits)	Southeasterly 40-55mph, though gusty with most powerful winds reaching up to 60mph or higher early morning.	Southeasterly 25 to 40mph, strongest toward west - speed likely to vary during day.
Effect of wind on you?	Mobility challenged in exposure. Crouching/bracing needed for stability in powerful gusts. Severe wind chill.	Strenuous walking in exposure on higher terrain, buffeting gusts in places. Considerable wind chill.
How wet? (Precipitation and its impact)	Snow soon rain, fading afternoon Snow falls on the high moors from dawn, soon turning to rain toward upper slopes from the south, persistent and heavy for a few hours, breaking up into the afternoon. Some showers by evening.	Damp air Fine drizzle where in cloud.
Cloud on the hills?	Fairly extensive A blanket of cloud shrouds the high moors, likely all day, with bases down to the middle slopes in the east or locally lower slopes during heavier precipitation. The highest bases on westernmost slopes.	Fairly extensive Covering the hills most or all day, lowest cloud in the morning. May lift gradually, local breaks mainly toward west.
Chance of cloud free summits?	20%	20%
Sunshine? Air clarity (below cloud)	Overcast and dull morning, becoming brighter afternoon. Visibility very poor, better as rain clears.	Overcast and dull. Misty many hills, some improvement may develop locally with time.
Temperature (at 600m)	1C rising to 3C. Feeling like -15C in direct wind.	2 or 3C. Wind chill feeling like -7 to -10C.
And in the valleys	3 to 5C.	3C rising to 7C afternoon.

Planning Outlook

All mountain areas of Britain from Tuesday, 27 January, 2026

Powerful southeasterlies prevail across Scotland this week and many indications favour strong east or southeasterly winds onward into the first half of February. Scottish mountains are expected to stay below freezing in the extended range, with fresh heavy snowfalls giving substantial depths and drifts across south and eastern areas, much less snow northwestward. Hills in England and Wales will see varying freezing levels, sub-zero for periods to 600m or lower, but intermittently lifting just above the tops - a mix of rain and upland snowfall. A generally unsettled pattern with Atlantic lows continuing to frequently circulate over Britain on a southerly track, whilst high pressure resides away to the north.

Forecast issued at 16:16 on Sunday, 25 January, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
