

Peak District

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

Alpkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.

General Summary for Monday, 2 February, 2026

British Mountain Summary:

Based on forecast chart for noon 2 February, 2026

Strong and gusty east-southeasterlies, gale-force in places, speeds generally increasing over England & Wales with time. Snow frequent or persistent for eastern Scottish hills, rain lower ground; whiteout over higher areas with blanket cloud. Largely dry west coasts with higher and more broken cloud.

Headline for Peak District

Strengthening gusty wind. Low cloud, drizzly rain.

Detailed Forecast for Monday, 2 February, 2026

How windy? (On the summits)	Easterly 25-30mph, gradually rising to 30-35mph afternoon, 40mph from dusk.
Effect of wind on you?	Increasingly uncomfortable walking over higher terrain, strenuous with considerable wind chill in exposure, gusts affecting balance particularly late in day.
How wet? (Precipitation and its impact)	Patchy rain Drizzle or light rain affecting many hills on-and-off, totals small, but feeling generally damp where in cloud.
Cloud on the hills?	Fairly extensive Mostly covering high terrain with bases regularly to middle slopes in the east, higher bases westward, but often covering higher moors. Local breaks may occur west toward Lancashire.
Chance of cloud free summits?	20%
Sunshine? Air clarity (below cloud)	Largely cloudy and dull, or misty over hills. Poor visibility and hazy east, better west of high moors.
Temperature (at 600m)	2C, then nearer 0C after dark. Feeling like -7 to -10C with time in the wind.
And in the valleys	3 to 5C, small variation night into day.

Peak District - Looking Ahead

	Tuesday 3 February	Wednesday 4 February
How windy? (On the summits)	Easterly 25 to 35mph, very gusty in places around exposed tops, edges and some downslopes to west.	South to southeasterly 20 to 25mph.
Effect of wind on you?	Blustery, strenuous walking over higher moors, gusts may affect balance; considerable wind chill.	Fairly small effect on walking, but feeling blustery and chilly in more exposed spots.
How wet? (Precipitation and its impact)	A little light snow on tops Most likely small amounts of precipitation, intermittent drizzle, or snow flurries above 400-500m. Risk becoming more persistent over east and southern hills, particularly later in the day, more widely into evening.	A little rain fading Rain from overnight leaving drizzle after dawn, tending to fade out.
Cloud on the hills?	Fairly extensive higher areas Covering much higher terrain above 500-600m, perhaps lower if precipitation persists. Higher bases westwards.	Extensive, may improve Low cloud shrouding the hills widely from mid or some lower slopes upward early in day. Gradual improvement with rising bases, may start to break up to tops.
Chance of cloud free summits?	30%	40%
Sunshine? Air clarity (below cloud)	Largely overcast, dull, locally brighter further west. Hazy, poor visibility in rain/snow.	Largely overcast, dull and misty start, but may improve with some brighter skies and good visibility developing below cloud.
Temperature (at 600m)	0 or -1C. Wind chill feeling like -8 to -12C.	1C rising to 3C. Wind chill feeling like -5C.
And in the valleys	3 or 4C, small change night into day.	3C rising to 7C.

Planning Outlook

All mountain areas of Britain from Tuesday, 3 February, 2026

Easterly winds prevail this week, strong to gale force over many hills for sustained periods. Freezing levels will vary, but in the Highlands rarely above 800m away from the west coast, at times sub-zero from 400-500m upward. In England and Wales only occasionally dropping below 600m, and at times just above freezing to high tops. Further snow focused on eastern Scottish mountains, with additional accumulations and drifting; very little further west. Some periods of hill snow for England and Wales during midweek. Cold easterly patterns are expected to continue onward into mid February, though higher pressure to the north may see reduced precipitation amounts, always driest with highest cloud in west.

Forecast issued at 16:26 on Sunday, 1 February, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
