Gusty wind easing. Largely dry, some sun, tops clear.

Detailed Forecast for Sunday, 10 May, 2026

How windy? (On the summits)	Northeasterly 25mph and notably gusty early in day, tending to lessen gradually, to 15-20mph afternoon-evening. Shifting north-northwesterly by evening, then rising again into night to 25-30mph.
Effect of wind on you?	Blustery with considerable wind chill in the morning. Gusty spots may affect comfortable walking for a time. Becoming fairly small later in day, but deteriorating again after dark.
How wet? (Precipitation and its impact)	Soon generally dry Local spots of drizzle or light rain from dawn, soon fading to leave a dry day. Then onward later into night, some showery rain develops from north.
Cloud on the hills?	Soon lifting Some patchy cloud banks may graze higher moors early morning, but lifting above the tops.
Chance of cloud free summits?	Soon above 90%
Sunshine? Air clarity (below cloud)	Fairly cloudy, patchy sunshine breaking through. Visibility very good.
Temperature (at 600m)	2C rising to 7C afternoon. Then dropping overnight toward 1C. Feeling as cold as -6C directly in the wind in morning, near 0C afternoon.
And in the valleys	6C at dawn, rising to 13C afternoon.

Peak District - Looking Ahead

	Monday 11 May	Tuesday 12 May
How windy? (On the summits) Effect of wind on you?	Northerly 15-20mph, may be 25mph early morning, dropping occasionally less into afternoon-evening. Fairly small, but distinctly chilly over the higher tops especially in the morning.	Westerly 25 to 35mph, squally gusts around showers. Very blustery across the hills, at times uncomfortable walking on exposed higher terrain. Considerable wind chill.
How wet? (Precipitation and its impact)	Local showers possible Risk patchy showers moving southwards, sleet on highest tops if these occur in morning. One or two local showers into afternoon, but many places dry.	Rain for a time, showers A band of showery rain moving southeast during the day, may be frequent rain over an hour or more western hills. Then scattered showers afternoon.
Cloud on the hills?	Very little or lifting above hills Any early cloud banks briefly on higher moors soon lifting above the tops.	Mostly little Most cloud above the hills, briefly drifting onto higher moors around showery rain.
Chance of cloud free summits?	90%	80%
Sunshine? Air clarity (below cloud)	Patchy sunshine develops. Visibility excellent.	Occasional sun. Visibility often very good, but reduced in rain or showers.
Temperature (at 600m) And in the valleys	1 or 2C early morning, rising to 6C afternoon. Feeling like -5C in the wind in morning. 5C from dawn, rising to 11C afternoon.	4 to 6C. Feeling like -5C directly in the wind on high tops. 5C at dawn, rising to 12C afternoon.

Planning Outlook**All mountain areas of Britain from Monday, 11 May, 2026**

Notably chilly across the hills for this time of year during the week ahead as air from the north-northwest prevails. Frequently near or below freezing over Scottish Munros, and at times dropping to freezing on high tops in England and Wales. Wind speed will vary, but increasing at times to gale force on hills, giving significant chill factor. Broadly showery, heavy bursts with hail and thunder in places, also often falling as snow on higher mountains, at least in Scotland, intermittently elsewhere. Some more persistent precipitation especially northwest Scotland. Also some drier windows - varying locally day-to-day - away from showers cloud will lift above hills and visibility will be very good.

Forecast issued at 16:00 on Saturday, 9 May, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
