General Summary for Sunday, 8 November, 2026

British Mountain Summary:
Based on forecast chart for noon 8 November, 2026

Patchy drizzle and areas of low cloud or fog, mostly east and southern Scotland, Pennines and inland across Wales, whilst western regions tend to fare better for cloud breaks and some sun. Very little wind overall. Near freezing on highest Scottish tops.

Headline for Peak District

Mix of cloud and fog, some sun.

Detailed Forecast for Sunday, 8 November, 2026

How windy? (On the summits)	Variable or westerly 10mph or less.
Effect of wind on you?	**Negligible**
How wet? (Precipitation and its impact)	**Rain not expected** Some dampness around fog.
Cloud on the hills?	**Extensive; cloud base sometimes very different on nearby slopes** Some local variations, but cloud likely extensive highest slopes. Lower down, fog clinging to many slopes from valleys up most or all day, whilst others are or become fog free or are between layers of cloud.
Chance of cloud free summits?	**20%**
Sunshine? Air clarity (below cloud)	Varied cloud or fog - some areas become brighter with glimpses of sun developing through day.
Temperature (at 600m)	5C
And in the valleys	6C at dawn, rising to 8 to 10C.

Peak District - Looking Ahead

	Monday 9 November	Tuesday 10 November
How windy? (On the summits)	East to southeasterly 10-15mph.	Southeasterly 25 to 30mph, some stronger gusts may develop.
Effect of wind on you?	**Small**	**Affecting ease of walking on high terrain, some gusty spots even lower down also noticeable; marked wind chill.**
How wet? (Precipitation and its impact)	**No rain expected** Locally feeling damp where in fog.	**Risk a little rain developing** Starting dry, then a little patchy rain moving in from the south with time, may become more persistent later, but amounts fairly small.
Cloud on the hills?	**Most hills foggy** Areas of fog likely from some lower elevations upward to the tops. Locally some slopes may emerge between fog banks, best breaks toward western hills.	**Fairly extensive, some breaks west** Cloud likely to cover many hills in the morning, in places foggy from lower elevations upward in the east, with better breaks west. Some of the low cloud may lift for a time, then returning on hills in rain.
Chance of cloud free summits?	**30%**	**30%**
Sunshine? Air clarity (below cloud)	Mostly little if any sun. Generally hazy, or foggy.	Largely cloudy, hazy or misty. Some brighter moments further west.
Temperature (at 600m)	4 or 5C.	5 or 6C. Feeling like -5C directly in the wind.
And in the valleys	1 to 3C from dawn, local frost if clear sky. Rising to 5 to 8C, coolest if foggy.	5C or locally cooler in shelter at dawn. Rising to 8 or 9C afternoon.

Planning Outlook

All mountain areas of Britain from Monday, 9 November, 2026

A slack pressure pattern to start the new week over Scotland, maintaining varied low cloud and fog. Lowering pressure to the south and an increasing easterly wind for England & Wales. Rain pushes into Wales on Tuesday, reaching the south Pennines with time, persisting in these areas into Wednesday, but very little extending further northwards. Into the second half of the week, a switch to a colder northerly flow will likely drop the freezing level to 800m increasingly widely for Thursday-Friday, plus frost on low ground. Some snow showers on northern Scottish mountains, but largely dry weather elsewhere. During next weekend, a shift to a less cold Atlantic influence - a changeable mix likely into the following week.
