General Summary for Monday, 9 November, 2026

British Mountain Summary:
Based on forecast chart for noon 9 November, 2026

Many Scottish mountains sunny, but variable areas of low cloud and low-level fog. Murky conditions more widely Pennines and east Wales. No rainfall generally, but dampness in the air locally. Light wind for most places; increasing easterly breeze for Wales.

Headline for Peak District

Fairly extensive fog from low terrain upward.

Detailed Forecast for Monday, 9 November, 2026

How windy? (On the summits)	East to southeasterly 10-15mph.
Effect of wind on you?	**Small**
How wet? (Precipitation and its impact)	**No rain expected** Locally feeling damp where in fog.
Cloud on the hills?	**Most hills foggy** Areas of fog likely from some lower elevations upward to the tops; lower down may disperse but staying hazy. Locally some slopes may emerge between fog banks, best breaks toward western hills.
Chance of cloud free summits?	**30%**
Sunshine? Air clarity (below cloud)	Mostly little if any sun. Generally hazy, or foggy.
Temperature (at 600m)	4 or 5C.
And in the valleys	1 to 3C from dawn, local frost if clear sky. Rising to 5 to 8C, coolest if foggy.

Peak District - Looking Ahead

	Tuesday 10 November	Wednesday 11 November
How windy? (On the summits)	Southeasterly 25 to 30mph, some stronger gusts may develop.	Easterly 20 to 30mph, gusty in places around higher edges.
Effect of wind on you?	**Affecting ease of walking on high terrain, some gusty spots even lower down also noticeable; marked wind chill.**	**Starting to affect comfortable walking on exposed terrain, variable gusts to some lower elevations. Marked wind chill.**
How wet? (Precipitation and its impact)	**Possibly light rain toward evening south** Much of the day likely dry, then a little patchy rain moving in from the south later in day, more likely onward after dark.	**Some rain and drizzle for a time** An area of rain more likely toward the south of the region, may give steady light rain and drizzle for a few hours - some uncertainty, but tending to break up and fizzle out as the day goes on.
Cloud on the hills?	**Fairly extensive, some breaks west** Cloud likely to cover many hills in the morning, in places foggy from lower elevations upward in the east, with better breaks west. Some of the low cloud may lift, then returning on hills by evening.	**Variable low cloud, breaks west** Banks of cloud likely to cover higher moors, particularly more eastern slopes, whilst westwards better breaks likely.
Chance of cloud free summits?	**30%**	**50%**
Sunshine? Air clarity (below cloud)	Largely cloudy, hazy or misty. Some brighter moments further west.	Overcast, a veil of high cloud covering the sky, but may brighten up a little in northwestern areas, visibility good away from rain.
Temperature (at 600m)	5 or 6C. Feeling like -5C directly in the wind.	3 or 4C. Feeling like -4 to -7C directly in the stronger wind.
And in the valleys	5C or locally cooler in shelter at dawn. Rising to 8 or 9C afternoon.	6 to 8C, small variation night and day.

Planning Outlook

All mountain areas of Britain from Tuesday, 10 November, 2026

Generally dry much of the week ahead in Scotland. Some variable cloud and fog early in the week. A gusty easterly wind for England & Wales and rain pushes into Wales on Tuesday, reaching the south Pennines with time, persisting into Wednesday in these areas, but very little extending further north. Into the second half of the week, a switch to a colder northerly flow will likely drop the freezing level to 800 m increasingly widely for Thursday-Friday, plus frost on low ground. Some snow showers on northern Scottish mountains, but largely dry weather elsewhere. During next weekend, a shift to a less cold Atlantic influence - a changeable mix likely into the following week.

Forecast issued at 15:00 on Sunday, 8 November, 2026
