General Summary for Sunday, 15 November, 2026

British Mountain Summary:
Based on forecast chart for noon 15 November, 2026

Rain and increasingly snow over Scottish mountains as colder air moves in. Drier and higher cloud bases toward southwest Highlands. Rain affects northern England and Wales with some persistent and locally heavier falls, becoming snow on hills into evening. Wind speed and direction will vary in all areas.

Headline for Peak District

Dry start, patchy rain, persistent and heavier later, cloud lowers.

Detailed Forecast for Sunday, 15 November, 2026

How windy? (On the summits)	Southwesterly 20 to 25mph early morning, but likely to drop to variable lower speeds through middle of day into afternoon. Later turning west then northwesterly, rising from dusk to 25-35mph into evening.
Effect of wind on you?	**Fairly small, may start to affect ease of walking on some higher exposed moors and noticeable wind chill. Worsening beyond sunset.**
How wet? (Precipitation and its impact)	**Rain on and off, likely more persistent afternoon-evening** Largely dry from dawn, for longest in eastern areas. Rain moving in from west during morning, patchy small amounts for a few hours, but increasing risk with time of steadier and heavier falls moving in from southwest, continuing through dusk. Into night, turning to sleet or snow above 400-500m, showery into night.
Cloud on the hills?	**Increasingly extensive** Patchy cloud around some slopes in the morning, but many hills may stay clear for several hours. With time, cloud likely to fill in more widely as rain develops, shrouding hills to some mid-slopes afternoon.
Chance of cloud free summits?	**60% dropping to 20% afternoon**
Sunshine? Air clarity (below cloud)	Bright start, but overcast high cloud, becoming increasingly dull. Visibility starts fairly good, some haze, then poor in rain.
Temperature (at 600m)	3 to 5C, little change until evening, then dropping after dark toward 0C. Feeling like -3C directly in the wind, but much colder after dark, nearer -10C.
And in the valleys	3C from dawn, rising to 7C afternoon.

Peak District - Looking Ahead

	Monday 16 November	Tuesday 17 November
How windy? (On the summits) **Effect of wind on you?**	Northwest 25-30mph early morning, easing to 10mph by early afternoon. Later rising SE'ly, gales into night. **Marked wind chill and blustery on tops in morning, becoming smaller. Then deteriorating after dark.**	Southwesterly 20 to 30mph, some uncertainty of highest speed, chance of reaching gale-force for periods. **Blustery over high terrain starting to affect comfortable walking and giving marked wind chill. May worsen.**
How wet? (Precipitation and its impact)	**Isolated showers fade; snow into night** Overnight showers may leave an odd brief shower of snow or hail in the morning, but fading to be dry. Onward into night, risk of significant hill snow developing, but turning wetter.	**Rain mostly northwest** Overnight rain likely to move away northeastwards, but leaving some patchy rain most frequently western hills toward Lancashire.
Cloud on the hills? **Chance of cloud free summits?**	**Little if any** Brief patches on higher slopes early in day soon all clearing. **90%**	**Mostly higher slopes toward north** Banks of cloud over higher slopes from dawn tending to rise and clear especially in east and southern areas, but may come and go on higher slopes toward northern Peak and into mid-Pennines. **60%**
Sunshine? Air clarity (below cloud)	Sunshine fairly weak due to high cloud, which may thicken further later. Visibility excellent.	Little if any sun, glimpses mainly east. Visibility very good where dry, but reduced in rain mainly north.
Temperature (at 600m) **And in the valleys**	0C; then tending to lift to 2C into night. Feeling like -10C if in stronger wind early in day. Starting around 1C, will reach around 6C afternoon.	5C much of day, may rise a little higher. Feeling like -5C if exposed to stronger wind. 2 to 5C in morning, but tending to rise further particularly southern areas.

Planning Outlook

All mountain areas of Britain from Monday, 16 November, 2026

Cold with higher terrain frequently or almost permanently frozen most or all next week particularly in Scotland. Meanwhile Wales and northern England will see one or two incursions of much warmer air together with areas of persistent rain and intermittent hill snow. Less precipitation generally northward across Scotland, but marked exceptions: here too, where the frequently northerly wind rises over mountains (with the sea directly to the north), accumulations of snow may well be considerable.

Forecast issued at 16:00 on Saturday, 14 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
