General Summary for Monday, 23 November, 2026

British Mountain Summary:
Based on forecast chart for noon 23 November, 2026

A largely fine day but a chilly southeasterly breeze - windier near west coasts. Sunniest northern Scotland. Remnants of a front toward west - some patchy cloud on southern hill groups in Scotland; some lower fog / cloud banks south Wales. Deteriorating from southwest into night.

Headline for Peak District

Sunshine and some patchy cloud or early fog; mostly light wind.

Detailed Forecast for Monday, 23 November, 2026

How windy? (On the summits)	Southeasterly 15mph. Will strengthen into night to around 30mph.
Effect of wind on you?	**Small, but a chilly feel on high tops.** **Deteriorating into the night.**
How wet? (Precipitation and its impact)	**Precipitation not expected**
Cloud on the hills?	**Patchy fog banks in morning** Some low-level cloud or fog from valleys upward locally from dawn into morning, mainly southern areas. Otherwise the hills generally clear.
Chance of cloud free summits?	**90%**
Sunshine? Air clarity (below cloud)	Sunshine and some early fog, leaving low level haze particularly in southern areas.
Temperature (at 600m)	3C. Feeling just below freezing in the breeze.
And in the valleys	Some lower areas partly frozen in morning after a frost. Rising to max 7C.

Peak District - Looking Ahead

	Tuesday 24 November	Wednesday 25 November
How windy? (On the summits)	South to southeasterly, strengthening quickly with height a very gusty 40-50mph. Powerful local gusts; into	Easterly 20 to 30mph, some local stronger gusts possible around high tops and edges.
Effect of wind on you?	**Significant wind chill and very difficult walking where exposed. Gusts knocking you off balance.**	**Starting to affect ease of walking on exposed terrain with considerable wind chill, some gusty spots affecting balance.**
How wet? (Precipitation and its impact)	**Rain and perhaps snow extending east** An area of rain will extend eastwards increasingly during the day, most persistent west; may fall as snow above 500-600m for a time at least.	**Rare snow flurries** An odd snow flurry may drift in from the east from time to time.
Cloud on the hills?	**Forming widely on higher areas in precipitation.** Cloud likely to shroud higher areas most or all day, in rain, lowering to between 250 and 400m.	**Often just above hills** Some cloud banks grazing higher moors for periods, but much cloud often above the hills, especially western areas.
Chance of cloud free summits?	**30%**	**60%**
Sunshine? Air clarity (below cloud)	Perhaps a little sun, most likely morning before cloud thickens. Hazy, and visibility poor in precipitation.	Little if any weak sun due to layers of high cloud. Visibility mostly very good.
Temperature (at 600m)	0 or 1C. Will feel as cold as minus 12C in the wind.	0 to 2C. Feeling near -10C if in stronger wind.
And in the valleys	Will reach around 6C.	Terrain partly frozen, with slight patchy frost in valleys in morning. Rising to max 5C afternoon.

Planning Outlook

All mountain areas of Britain from Tuesday, 24 November, 2026

Staying near or below freezing across most mountains with below-average temperatures for late November, much higher terrain persistently frozen and regular frosts into valleys and glens. Some rain, sleet and hill snow on Tuesday as a front drifts in from the west, but then fizzles out into Wednesday. East or southeasterly winds prevail into midweek and beyond, with snow flurries focused on more southeastern hill groups in the Highlands, at times the Borders and Pennine areas. In the extended outlook toward next weekend and beyond, there is uncertainty about the extent of incoming Atlantic fronts and scope for further snowfalls, or any pushes of milder air trying to arrive. A more 'blocked' chillier easterly driven weather regime may well prevail into early December.
