General Summary for Sunday, 11 May, 2025

British Mountain Summary:

Based on forecast chart for noon 11 May, 2025

Showers develop inland western Scotland, heavy bursts or thunderstorms possible northwest later. Chance spots of rain south Scotland and north England, though mostly sunny. Modest winds here, some increase after dusk. Bursts of showery rain south Wales, chance localised thunderstorms later; some drift into north Wales.

Headline for Eryri / Snowdonia National Park

Fine through midday; showery bursts develop later

Detailed Forecast for Sunday, 11 May, 2025

How windy? (On the summits)	East to southeasterly 10-20mph.
Effect of wind on you?	Mostly small.
How wet? (Precipitation and its impact)	Chance afternoon/evening showery outbreaks Chance of showery bursts later afternoon in mid-Wales. Toward evening, greater risk of localised heavier bursts more widely and continuing after dusk, potentially local thunderstorms.
Cloud on the hills?	Not expected until around dusk, if any Toward dusk, patches of cloud forming on some slopes if rain occurs locally.
Chance of cloud free summits?	Nearly certain until late
Sunshine? Air clarity (below cloud)	Sunny through high cloud much of the day. Middle and high cloud filling in somewhat in the afternoon. Excellent visibility after early haze clears away.
How Cold? (at 900m)	10 to 12C, some local areas warming up to 14C where sun persists, notably northwest of highest terrain.
Freezing Level	Above the summits

Eryri / Snowdonia National Park - Looking Ahead

	Monday 12 May	Tuesday 13 May
How windy? (On the summits) Effect of wind on you?	East to southeasterly 15-25mph. Lightest winds at dawn, though some gusts through elevated passes and over high Fairly small, comfortable walking affected in highest winds. Gusts may challenge stability on high terrain.	Easterly 20-30mph. Some gusts over tops and down western slopes, 35mph at times. Walking becoming impeded, balance challenged on exposed terrain where gusts blow.
How wet? (Precipitation and its impact)	Bursts of rain, chance thunderstorms Bursts of rain, heavy at times. Chance of increasing frequency or extended periods afternoon with local thunderstorms.	No rain expected
Cloud on the hills? Chance of cloud free summits?	Mostly just high summits High summits will be intermittently capped. Cloud base will vary, at times covering most high terrain during afternoon rain. 60%	Not expected Above 90%
Sunshine? Air clarity (below cloud)	Little sun, most of the day, some glimpses later. Hazy at first, generally poor visibility if rain persists.	Widely sunny. Excellent visibility though some haze at first.
How Cold? (at 900m) Freezing Level	10 or 11C, rising only slightly if at all during the day. Above the summits	10C, rising to 13C. Some local western slopes a degree or two warmer. Above the summits

Planning Outlook

All mountain areas of Britain from Monday, 12 May, 2025

Lingering bursts of rain in Wales early next week will gradually fade as low pressure slips away. Only odd spots of rain in northwest England and west Scotland, soon fading. A continental wind track and high pressure to the east will keep most cloud above the summits next week, with eastern areas often sunny. Settled conditions prevail midweek into next weekend as high pressure reestablishes just north of the British Isles. A mix of cloud and sun with light winds, generally easterly though variable with little change day to day. Slight frosts at dawn in sheltered spots, mostly warm by day. Very dry ground conditions, beware high risk of fire.

Forecast issued at 16:23 on Saturday, 10 May, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
