General Summary for Tuesday, 24 June, 2025

British Mountain Summary:

Based on forecast chart for noon 24 June, 2025

Frequent rain/drizzle onto most west coastal slopes, steadier rain for a time in the morning slipping east. High terrain mostly foggy, down to lower slopes in places along west coasts; best of breaks east Scotland and North Pennines. Blustery for most with risk of gales high terrain of England and north Wales.

Headline for Eryri / Snowdonia National Park

Very blustery and foggy; drizzle on western slopes, extended rain early

Detailed Forecast for Tuesday, 24 June, 2025

How windy? (On the summits)	West to southwesterly 30 to 40mph.
Effect of wind on you?	Very blustery over the mountains, walking becoming arduous in places on exposed higher areas. Considerable wind chill.
How wet? (Precipitation and its impact)	Drizzly rain western slopes; briefly more extensive rain early. Generally damp with fairly persistent drizzle on western hills; small amounts east. Steadier rain across most areas for a time in the morning.
Cloud on the hills?	Extensive Shrouding the mountains from lower slopes upward near coast, above 400-600m inland, higher north/east of Ogwen.
Chance of cloud free summits?	10%
Sunshine? Air clarity (below cloud)	Largely cloudy, little or no sun. Rather misty across hills, locally good visibility below cloud inland/east.
How Cold? (at 900m)	11 or 12C, little if any change all day. Feeling near freezing in the wind.
Freezing Level	Above the summits

All mountain areas of Britain from Wednesday, 25 June, 2025

West to southwesterly winds prevail this week and a series of frontal systems come in from the Atlantic. Rain and drizzle most frequent in west with low cloud often covering hills, typically most extensive in Scotland. Higher cloud bases and drier further eastwards. Temperatures near average, or lower at times in Scotland. Often windy, risk of more extensive upland gales and some heavier rain as deeper areas of low pressure likely move in later in the week. Some indication of a brief settled spell into the weekend and rising temperatures, though northwest Scotland remaining at risk of frontal weather systems.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
