General Summary for Friday, 11 July, 2025

British Mountain Summary:

Based on forecast chart for noon 11 July, 2025

Sunny and very warm across most areas with light or negligible wind - beware risk of sunburn and dehydration. Warm temperatures will persist overnight. Temperatures nearer the middle teens on Scotland's west coast in the breeze, some early patchy cloud onto Skye and coastal slopes to the south.

Headline for Eryri / Snowdonia National Park

Sunny and very warm, staying warm into night

Detailed Forecast for Friday, 11 July, 2025

How windy? (On the summits)	Light winds with variable direction. Generally southwesterly in the morning, always 10mph or less.
Effect of wind on you?	Negligible.
How wet? (Precipitation and its impact)	No rain
Cloud on the hills?	Little or no cloud An odd patch of cloud may drift onto low southwest slopes at dawn, soon dissipating for cloud-free summits.
Chance of cloud free summits?	Above 90%
Sunshine? Air clarity (below cloud)	Widespread sunshine; beware sunburn and dehydration. Excellent visibility; some haze eastern Cymru/Wales.
How Cold? (at 900m)	17 to 19C, little change through the day. Warmest in the Berwyn Mountains where it may reach 22C.
Freezing Level	Well above the summits. (Remaining warm on high ground overnight.)

Eryri / Snowdonia National Park - Looking Ahead

	Saturday 12 July	Sunday 13 July
How windy? (On the summits) Effect of wind on you?	Southeasterly 15mph or less, often light and variable. Rising towards 20mph into nighttime. Small or negligible.	Southeasterly with some variability, 15-20mph. Breezes occasionally reaching 25mph, notably early in the day. Fairly small, occasional uncomfortable breezes; some buffeting gusts early.
How wet? (Precipitation and its impact)	Very likely dry Remote risk of isolated thunderstorms in the late afternoon or early evening. Otherwise, dry all day.	Substantially dry Few local spots of light rain later in the day, otherwise dry.
Cloud on the hills?	Cloud not expected	Any cloud unlikely
Chance of cloud free summits?	Almost certain	Above 90%
Sunshine? Air clarity (below cloud)	Widespread strong sunshine; beware sunburn, dehydration and heatstroke. Low level haze, but excellent visibility on high ground.	A widely sunny morning, patchy cloud building and increasingly blocking sun. Excellent visibility.
How Cold? (at 900m) Freezing Level	20C at dawn, rising a degree or two. Remaining warm overnight. Well above the summits. (Valley temperatures approaching 28 to 30C in the afternoon, hottest east Wales.)	17 or 18C, only a slight warming if any. Above the summits

Planning Outlook

All mountain areas of Britain from Saturday, 12 July, 2025

Very warm or hot conditions this weekend in the mountains and the valleys, with extreme risk of wildfire in Scotland; beware dehydration and sunburn. Light winds and very little cloud.

Low pressure returns late Sunday into Monday bringing rain to most, risk heavy or thunderstorms north England and Scotland. Temperatures will cool towards average and often raining for the first half of the week. Becoming more mixed from mid-week as pressure goes slack and Atlantic fronts make only weak pushes from the west. Patchy rain and cloud will come and go with the best opportunities for sun in north and western areas.

Forecast issued at 16:08 on Thursday, 10 July, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
