General Summary for Monday, 15 September, 2025

British Mountain Summary:

Based on forecast chart for noon 15 September, 2025

Rain likely persistent for the northern Highlands, at times heavy. Showery rain elsewhere over Scotland, may cluster locally into areas of more frequent rain. Wind variable for Highlands, but likely increasing. Westerly gales over hills in England, severe on tops in Wales, and raining most of the day.

Headline for Eryri / Snowdonia National Park

Gales, storm-force on tops. Near-constant rain.

Detailed Forecast for Monday, 15 September, 2025

How windy? (On the summits)	West to southwesterly 55 to 70mph, at times 80mph over higher mountains with stronger gusts.
Effect of wind on you?	Very difficult conditions all day, with significant wind chill and buffeting from mid-elevations upward. Any mobility often challenging higher up, gusts knocking you off your feet.
How wet? (Precipitation and its impact)	Often raining all day, heavy bursts Frequent showery rain, merging into near-constant rainfall on western hills, often heavy. Showers passing eastwards across all areas. Wet underfoot with fast-flowing streams.
Cloud on the hills?	Fairly extensive higher areas Varying bases, but often around 600-800m, covering the the hills in cloud. Occasionally patches below 500m in west.
Chance of cloud free summits?	20%
Sunshine? Air clarity (below cloud)	Little or no sun, glimpses mostly in the east. Visibility often poor due to rain.
How Cold? (at 900m)	7C. Feeling like -5 to -8C directly in the wind.
Freezing Level	Above the summits

All mountain areas of Britain from Tuesday, 16 September, 2025

An ongoing unsettled outlook generally dominated by low pressure. Uncertainty about the track of a developing low into midweek, a risk of further extensive rain and gales, though the worst of these conditions may be confined to England and Wales. Areas of rain and showers frequently in the forecast later in the week. Temperatures near-average, but feeling cool when exposed to wind. A chillier northwesterly may emerge by next weekend, briefly dropping near freezing on highest Scottish tops. Indications then favour higher pressure at least briefly expanding northwards early next week for some drier days, but unlikely to settle down for long.

Forecast issued at 16:15 on Sunday, 14 September, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
