General Summary for Monday, 13 October, 2025

British Mountain Summary:

Based on forecast chart for noon 13 October, 2025

Inversion conditions widely across Scottish highlands. High tops of Lakeland and Snowdonia also likely above a cloud layer. Feeling quite warm in the autumn sunshine on summits above the cloud; valleys and glens starting cooler. Cloudier over Pennines and east Wales, most fog rising to high terrain with local breaks.

Headline for Eryri / Snowdonia National Park

High summits above cloud layer; warm in sunshine

Detailed Forecast for Monday, 13 October, 2025

How windy? (On the summits)	Southeasterly 10-15mph, occasional 20mph. Notable gusts over summits and elevated passes.
Effect of wind on you?	Mostly small.
How wet? (Precipitation and its impact)	No rain expected
Cloud on the hills?	Mid-level cloud, mostly eastern slopes Low fog from dawn most extensive over Berwyn group and eastern parts of Snowdonia NP, some banks on middle slopes. Cloud lifts with patches between 500-800m, more sheet-like in the east in the morning. Terrain above 800m likely above cloud layer, though some patchy cloud may drift higher later in the day.
Chance of cloud free summits?	70% (high summits above cloud)
Sunshine? Air clarity (below cloud)	Sunny on high tops, more mixed lower terrain, possibly quite cloudy east. Excellent visibility above cloud, hazy lower down.
How Cold? (at 900m)	11C; little change with height in the morning though valleys starting much cooler. Highest terrain above cloud may warm a degree or two.
Freezing Level	Above the summits

Eryri / Snowdonia National Park - Looking Ahead

	Tuesday 14 October	Wednesday 15 October
How windy? (On the summits) Effect of wind on you?	Easterly 10 to 15mph, in places gusty 20mph around some mountains, not necessarily on the summits. Mostly small	Generally northeasterly though variable, 10-15mph. May reach near 20mph mid-Wales. Gusts likely. Fairly small
How wet? (Precipitation and its impact)	No rain expected	No rain expected
Cloud on the hills? Chance of cloud free summits?	Patchy cloud, inversion; clearer west Varied valley fog and cloud banks on some slopes in morning, high tops likely start above the cloud layer. Cloud tending to drift higher up, and may cover higher slopes at times. Clearer overall in west. 60% (above cloud banks for a time)	Cloud lifts to high ground, well-broken From dawn, well broken cloud at various heights, perhaps more extensive across Berwyn group - Snowdon likely above the cloud layer. Bases lift to the high tops, which will be regularly exposed as cloud continues to break. 70%
Sunshine? Air clarity (below cloud)	Sunshine generally best in west Wales. The air very clear if above the cloud. Some mist lower down in morning.	Increasingly sunny as cloud increasingly breaks. Very clear air on the high tops, a haze lower down.
How Cold? (at 900m) Freezing Level	9C, small variation from lower slopes upward in morning, whilst highest tops a degree or so warmer all day. Above the summits	7 or 8C. Cooler in the valleys at dawn. Above the summits

Planning Outlook

All mountain areas of Britain from Tuesday, 14 October, 2025

High pressure resides over the country through the week, maintaining quiet weather. In the mornings, varied low cloud and morning fog is likely while inversion conditions likely to remain over highest mountains for several days. A haze will linger on low slopes below the inversion. During midweek the inversion starts to weaken as pressure begins to fall gradually; cloud will be well-broken for many and begin to lift to higher terrain. Light winds overall, an easterly breeze likely for Wales.

Uncertainty about the weather pattern development toward next weekend: some indication of strengthening winds bringing some rain, but may not reach all areas. Later October has hints of chillier northerly air, especially in Scotland.

Forecast issued at 16:00 on Sunday, 12 October, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
