General Summary for Monday, 24 November, 2025

British Mountain Summary:

Based on forecast chart for noon 24 November, 2025

Turning cold from north and extensively windy behind an area of low pressure centred over SE England. Snow and hail showers will affect N & E Scotland, whilst further south patchy rain (sleet highest summits), but total rainfall small.

Headline for Eryri / Snowdonia National Park

Showers, mainly morning; upland wind close to gale.

Detailed Forecast for Monday, 24 November, 2025

How windy? (On the summits)	Northerly, 30 and on higher ridges and tops 40mph.
Effect of wind on you?	Walking arduous or in places difficult, particularly near precipitation, where in gusty conditions, balance tricky and wind chill significant.
How wet? (Precipitation and its impact)	Little or perhaps no precipitation Intermittent rain overnight will continue into daylight before easing to well scattered patches of showery rain.
Cloud on the hills?	Cloud base rising - probably not clearing higher summits Morning: cloud shrouding higher areas extensively. Afternoon: Gradually cloud base rising toward 750 to perhaps 900m mid Wales, but patches may persist at or below 600m near and north of the A5.
Chance of cloud free summits?	20% Snowdon range to in afternoon 70% elsewhere
Sunshine? Air clarity (below cloud)	Occasional sunshine, mainly mid Wales. Visibility very good
How Cold? (at 900m)	Around 1C - a marginal drop likely through the day Will feel as cold as minus 8C directly in the wind.
Freezing Level	1050m.

Eryri / Snowdonia National Park - Looking Ahead

	Tuesday 25 November	Wednesday 26 November
How windy? (On the summits)	Northerly 25mph gradually easing to 15mph.	Southwesterly soon 45 to 55mph. May ease a little afternoon.
Effect of wind on you?	Considerable buffeting and wind chill after dawn, but will become small through afternoon.	Extensively difficult walking where exposed with sudden powerful gusts and significant wind chill.
How wet? (Precipitation and its impact)	Little or no precipitation Showers, mainly Snowdon range, of hail or snow above about 600m.	Rain and drizzle on and off Rain and drizzle gradually spreading inland (briefly snow highest summits). The rain frequent western mountains, particularly Snowdon area, but total fall small elsewhere.
Cloud on the hills?	Varied; some higher tops clearing, others remaining in cloud. Snowdon range: cloud base typically 600 to 800m, perhaps a little higher afternoon. Elsewhere: cloud will lift off some higher summits, whilst 'hanging' on some higher slopes all day.	Hills filling in with fog; lowest base west Some higher slopes may initially be cloud free. Will soon deteriorate, across western hills, cloud widely below 300-450m (lowest Llyn peninsula to Snowdon area). Elsewhere, slowly filling in across higher slopes, typically 500 to 700m afternoon.
Chance of cloud free summits?	20% Snowdon range; 70% elsewhere	Less than 10%
Sunshine? Air clarity (below cloud)	Bright sunshine, mainly away from Snowdon range. Very good visibility.	Glimpses of weak sunshine lower slopes east Wales and near and north of A5. Otherwise soon extensively dull and particularly west Wales misty.
How Cold? (at 900m)	0C	1C rising to 5C. Will feel as cold as minus 12C directly in the wind.
Freezing Level	Around 900m; may rise slowly through day. Frost some valleys morning.	Locally 900m at first; rising above the summits, probably during morning. Frost valleys, mainly east Wales at dawn.

Planning Outlook**All mountain areas of Britain from Tuesday, 25 November, 2025**

As a series of deep Atlantic lows pass north of or across Britain, rainfall be become high particularly on western mountains together with frequent upland gales and low cloud. In Scotland, temperatures on the Munros will sometimes be below freezing point, but fresh snow transient, whereas elsewhere, snow rare, if any.
