## General Summary for Thursday, 4 December, 2025

### British Mountain Summary:

#### Based on forecast chart for noon 4 December, 2025

A complex weather situation with areas of frequent or persistent rain and hill snow, focused from the southern Highlands to northern England; often strong SE'ly winds. Further north in the Highlands, generally drier with higher cloud breaks. In Wales, becoming showery westerlies with risk of hail.

### Headline for Eryri / Snowdonia National Park

Early rain/snow on tops, then squally showers, cloud rising.

## Detailed Forecast for Thursday, 4 December, 2025

<b>How windy? (On the summits)</b>	Pre-dawn, southerly 40-45mph, but by dawn a possible brief lull. Then soon mostly westerly 25-30mph, sudden squalls in showers.
<b>Effect of wind on you?</b>	<b>Expect variations, but soon frequently feeling blustery over hills with considerable wind chill. Gusty spells will challenge balance in exposure.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Rain and upland snow, then showers</b> Morning rain moves gradually to the east, snow above 800m, lingering for several hours. Giving way to scattered showers off Cardigan Bay into afternoon, possible hail.
<b>Cloud on the hills?</b>	<b>Improving to banks over high tops</b> Variable banks of cloud on high terrain, a few lower banks too, tending to clear through morning to just banks over high terrain as showers come and go. An increasing chance of clear summits, particularly east.
<b>Chance of cloud free summits?</b>	<b>20% rising to 50% afternoon inland</b>
<b>Sunshine?</b> Air clarity (below cloud)	Glimpses of weak sun through high cloud appearing afternoon. Good visibility though some haze.
<b>How Cold? (at 900m)</b>	0C Feeling like -10C in exposure to stronger winds on tops during day.
<b>Freezing Level</b>	900m

**All mountain areas of Britain from Friday, 5 December, 2025**

Generally unsettled through the weekend and into next week with areas of low pressure circulating near to the British Isles. Temperatures often near to freezing point on higher Scottish mountains, at times on tops elsewhere, though some thawing will occur periodically even to high tops in the Highlands. A complex series of frontal systems bringing spells of rain and some upland snow, mixed with showers with hail mostly near western coasts. Wind speeds will also vary, often south to southwesterlies, at times reaching gale force on tops, but intermittent lulls.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
