General Summary for Saturday, 6 December, 2025

British Mountain Summary:

Based on forecast chart for noon 6 December, 2025

Wind dropping light across much of the inland Highlands, but gusty near west coasts and staying strong for longer in the far north. Low cloud fairly widespread with patchy rain, clearer toward northwest. Southwesterly winds England, gale-force in Wales, driving in frequent heavy showery rain.

Headline for Eryri / Snowdonia National Park

Windy, strengthening gales on tops. Heavy showery rain on and off.

Detailed Forecast for Saturday, 6 December, 2025

How windy? (On the summits)	Southwesterly 35 to 45mph, increasingly often reaching 50mph high tops middle of day into afternoon, squally gusts.
Effect of wind on you?	Challenging walking conditions, frequent buffeting affecting balance on exposed tops and ridges; marked wind chill.
How wet? (Precipitation and its impact)	Frequent rain, heavy at times, chance hail and thunder Rain on and off most or all day, a mix of drizzle where in cloud and some steadier rain, but heavier showery bursts at times, particularly western hills, possible hail, isolated thunder. Wet underfoot following previous rain, streams in spate, local flooding.
Cloud on the hills?	Fairly extensive tops Often covering higher slopes, bases varied in and out of rain, mostly 600 to 800m. More frequent to mid-slopes near Cardigan Bay for periods. Higher breaks more common Bala to Berwyn hills.
Chance of cloud free summits?	20%
Sunshine? Air clarity (below cloud)	Glimpses of sun mostly east. Visibility varied, poor in rain, intermittently good out of cloud.
How Cold? (at 900m)	4C. Wind chill feeling like -7 to -10C.
Freezing Level	Above the summits.

All mountain areas of Britain from Sunday, 7 December, 2025

Generally unsettled onward into next week with areas of low pressure moving in from the Atlantic on prevailing southwesterly winds. Temperatures often relatively mild, typically only higher tops in the Highlands intermittently just below freezing point, expect periods of thawing even up to these tops. Day-to-day weather detail will be uncertain even in short-range as complex systems develop - a series of frontal systems bringing spells of rain - any snowfall mostly confined to highest tops in Scotland; also showers at times with hail mostly near western coasts. Wind speeds will also vary, for periods reaching gale force on tops, but intermittent lulls.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
