General Summary for Tuesday, 16 December, 2025

British Mountain Summary:

Based on forecast chart for noon 16 December, 2025

Showery in western Scotland, with hail, snow on higher mountains; fewer showers eastwards, more sun and higher cloud breaks. Strongest winds in NW Highlands, up to gale force tops. England and Wales largely dry and bright, patchy cloud western tops.

Headline for Eryri / Snowdonia National Park

Light-moderate breeze. Dry with sun, cloud patches west.

Detailed Forecast for Tuesday, 16 December, 2025

How windy? (On the summits)	Westerly 10 to 20mph, least wind into early afternoon. Strengthening onward into night, well beyond midnight reaching 35-45mph.
Effect of wind on you?	Fairly small. Deteriorating into night.
How wet? (Precipitation and its impact)	Largely dry Chance of an odd light shower mainly near to the west coast. Very wet underfoot following previous heavy rain, streams in spate, flooding.
Cloud on the hills?	Patches on western tops Patchy cloud banks most common nearer to coasts, may come and go above 700m, but well broken above tops further inland. Often clearer hills near Bala.
Chance of cloud free summits?	60%, to 80% well inland.
Sunshine? Air clarity (below cloud)	Occasional sun and thin high cloud. Visibility excellent out of cloud.
How Cold? (at 900m)	1 or 2C. Feeling like -4C directly in the breeze.
Freezing Level	Close to highest summits above 900m. Slight frost sheltered valleys in morning.

All mountain areas of Britain from Wednesday, 17 December, 2025

An unsettled southwesterly weather pattern continues mid-late this week. On Wednesday, another system sweeps in from the Atlantic bringing further rain and gales. Showery conditions then persist in western Scotland, with hail and snow on high tops. Scottish mountains often near or below freezing above 900m, only brief thawing higher up. Meanwhile, England and Wales stay mild midweek with more heavy rain likely into Thursday, then lowering to freezing on high tops for periods from Friday. A change of weather pattern is likely in the run up to Christmas, as high pressure builds northward, bringing drier weather, fog and frost more common.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
