General Summary for Sunday, 21 December, 2025

British Mountain Summary:

Based on forecast chart for noon 21 December, 2025

A blustery, gusty morning in northern England and Scotland, gales for a time in northwest Scotland, tending to ease. Patchy rain from central Scotland down the spine of the Pennines eases into drizzle over the high tops, drizzle in east Wales too with extensive hill fog in these areas. Best of breaks west Wales and NW Highlands.

Headline for Eryri / Snowdonia National Park

Fog and some drizzle east; drier, brighter western slopes

Detailed Forecast for Sunday, 21 December, 2025

How windy? (On the summits)	South-southeasterly 20-25mph at dawn, stronger winds pre-dawn, easing to 15-20mph most of the day though stronger gusts may blow over the high tops.
Effect of wind on you?	Fairly small on many slopes but blustery gusts will blow over the tops from time to time.
How wet? (Precipitation and its impact)	Substantially dry during daylight Some patchy drizzly rain, greatest risk east Wales; many slopes may well stay dry all day, greatest chance west/north. Rain will arrive from the southeast overnight.
Cloud on the hills?	Extensive, some breaks westernmost hills Cloud shrouds the high tops in Snowdonia NP, sheet-like cloud east Wales with bases down to 500m widely. Slopes to the west of the highest summits will see higher breaks, perhaps some clear tops.
Chance of cloud free summits?	10%; 40% westernmost tops.
Sunshine? Air clarity (below cloud)	Mostly overcast and dull with poor visibility, though glimpses of weak sunshine are likely west of the high tops with good visibility here.
How Cold? (at 900m)	3 or 4C most of the day; some slopes locally 2C to start the day. Warming slightly overnight.
Freezing Level	Above the summits

All mountain areas of Britain from Monday, 22 December, 2025

Cloud and patchy rain lingers for a few more days early next week, then a slow change to drier and chiller weather into the Christmas period as high pressure builds to the north. Easterly winds will be dominant, the strongest winds in England and Wales. Cloud may be fairly sheet-like in the east sometimes, though variably more extensive or broken. The coldest air will reach England and Wales on the easterly wind with freezing levels reaching as low as 400-600m in Wales, staying slightly warmer in northern Scotland with freezing levels nearer the high summits for a time under the core of high pressure.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
