## General Summary for Wednesday, 14 January, 2026

### British Mountain Summary:

#### Based on forecast chart for noon 14 January, 2026

Cold westerly winds, backing southerly and strengthening ahead of a front which will move into western Scotland during the afternoon, with snow setting in for western mountains, patchier further east. Ahead of this front, scattered snow showers. Mostly dry for England and Wales until front edges precipitation into west later.

### Headline for Eryri / Snowdonia National Park

Mostly dry, but winds backing southerly and strengthening. Risk snow later in day.

## Detailed Forecast for Wednesday, 14 January, 2026

How windy? (On the summits)	West backing southerly 20-25mph in a lull after dawn. Will progressively strengthen hour by hour to reach 40-50mph around or after dusk, strongest west Wales.
Effect of wind on you?	<b>Fairly small morning.</b> <b>Then walking increasingly difficult and wind chill becoming significant.</b>
How wet? (Precipitation and its impact)	<b>Mostly dry, until later in day.</b> Mostly dry, but the threat of snow, rain lower slopes, setting in late in day from west, mainly by or after dusk.
Cloud on the hills?	<b>Probably remaining extensive on most or all higher areas</b> Cloud sometimes forming below 450m near the coast, but cloud base generally rising to 600 to 800m - possibly a few breaks to higher summits, mainly east Wales. Cloud base may drop markedly later in day.
Chance of cloud free summits?	<b>20%</b>
Sunshine? Air clarity (below cloud)	Occasional sunshine, mainly well inland morning. Becoming overcast. Visibility often very good, but poor in snow.
How Cold? (at 900m)	-1C. Directly in wind will feel as cold as minus 12C.
Freezing Level	800m coastal hills; otherwise 700m. Frost many valleys after dawn.

## Eryri / Snowdonia National Park - Looking Ahead

	Thursday 15 January	Friday 16 January
<b>How windy? (On the summits)</b>	South to southwesterly 25mph. Uncertainty later in day: There may be a pronounced lull but could strengthen	Low confidence in track of small scale low. Risk westerly 40 to 60mph early in day, becoming southerly 30mph.
<b>Effect of wind on you?</b>	<b>Mostly fairly small.</b>	<b>High uncertainty over track of small scale low. Risk early in day of difficult conditions with significant wind chill, then easing.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Risk showers</b> Most likely though extensively dry. But some uncertainty: chance showers morning west Wales, and of persistent rain late in day (snow higher slopes).	<b>Overnight rain/snow, then showers.</b> Risk of heavy snow during the early hours, perhaps down to 500m, but this precipitation will likely have cleared by dawn leaving showers, snow on tops.
<b>Cloud on the hills?</b>	<b>May well clear most summits</b>  Cloud base likely to lift toward 900m widely, possibly sometimes clearing higher tops. Risk though in precipitation of cloud filling in extensively across the hills.	<b>Fairly extensive, best breaks north.</b>  Cloud very likely fairly extensive across the hills, following the overnight rain and snow. Best breaks across northern most tops. General bases around 600-800m.
<b>Chance of cloud free summits?</b>	<b>50%</b>	<b>30%</b>
<b>Sunshine?</b> Air clarity (below cloud)	Patches of sunshine - may give way to thickening cloud. Visibility excellent but very poor in precipitation.	Little or no sun. Visibility good or very good away from showers.
<b>How Cold? (at 900m)</b>	0 or 1C	0C
<b>Freezing Level</b>	900 or 1000m.	900m, but may have been as low as 600m overnight.

**Planning Outlook****All mountain areas of Britain from Thursday, 15 January, 2026**

Very uncertain forecast late Thursday and into Friday, as a small scale and rather potent low pressure system edges northwards across the country on a very uncertain track. May bring a spell of strong winds and upland heavy snowfall overnight and into Friday morning before pulling away to the east. Thereafter, a drier and chilly weekend will follow. Looking further ahead, a colder continental influence may be drawn in on south to east winds, with the snow pack across the Scottish Highlands being enhanced by further spells of snowfall where fronts edge in from the west, whilst further south snow accumulates on higher areas, and occasional falls reach lower slopes.

**Forecast issued at 15:58 on Tuesday, 13 January, 2026**

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
