## General Summary for Sunday, 18 January, 2026

### British Mountain Summary:

Based on forecast chart for noon 18 January, 2026

Cloudy and damp air over many hills, more persistent rain and drizzle develops over northern England and east Wales. Clearer toward north-northwest Scotland. Near or below freezing on Scottish mountains. South to southeasterly winds, gusty in places; strongest toward Skye.

### Headline for Eryri / Snowdonia National Park

Varied low cloud, rain mostly east; light-moderate breeze.

## Detailed Forecast for Sunday, 18 January, 2026

How windy? (On the summits)	South to southeasterly 15 to 20mph, risk of stronger gusts in places around higher tops.
Effect of wind on you?	<b>Fairly small, but expect noticeable chill factor in exposure on tops.</b>
How wet? (Precipitation and its impact)	<b>Rain most persistent east</b> Patchy rain and drizzle extending northwards, some steadier rain or locally risk heavier at times over eastern hills in mid-Wales, smaller amounts westwards, near/west of Snowdon group may see little.
Cloud on the hills?	<b>Fairly extensive, highest north/west</b> A cloud sheet covers mid and east Wales most or all day from mid-elevations upward. Further west, higher bases, but cloud banks across many hills, some higher breaks mainly north of Ogwen valley.
Chance of cloud free summits?	<b>10%, to 30% north.</b>
Sunshine? Air clarity (below cloud)	Largely cloudy. Visibility good out of cloud mainly toward north/northwest, but widely dull and in places misty to some mid or lower slopes inland and east.
How Cold? (at 900m)	2C. Feeling like -5C directly in the wind.
Freezing Level	Some higher slopes near to freezing point, terrain partly frozen higher up.

## Eryri / Snowdonia National Park - Looking Ahead

	Monday 19 January	Tuesday 20 January
<b>How windy? (On the summits)</b>	Southerly 20mph, gusty 25mph in places around some higher tops, possibly 30mph for periods.	South-southeasterly, likely strengthening 30 to 50mph, powerful gusts around high tops and in places downslope to north.
<b>Effect of wind on you?</b>	<b>Fairly small, but at times more blustery in exposure, affecting ease of walking. Marked wind chill.</b>	<b>Increasingly arduous walking conditions, buffeting gusts affecting balance; significant wind chill.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>A little rain</b> Patchy rain up to the summits, may become more persistent from south.	<b>Frequent or persistent rain</b> Patchy rain may become more frequent from the south, some steadier rain setting in for periods, risk heavier in west.
<b>Cloud on the hills?</b>	<b>Fairly extensive</b>  Low cloud shrouding the hills widely, from mid-slopes upward in mid Wales. Some higher bases northwestward, locally may break toward some tops.	<b>Fairly extensive</b>  Covering most higher terrain, to some mid-slopes in rain, some breaks north of A5.
<b>Chance of cloud free summits?</b>	<b>20%</b>	<b>20%</b>
<b>Sunshine?</b> Air clarity (below cloud)	Overcast and dull, poor visibility over possibly many hills, hazy lower down, locally better toward northwest.	Generally cloudy and dull. Hazy or misty over most hills, some good visibility lower slopes in north if dry.
<b>How Cold? (at 900m)</b>	3C. Feeling like -5 to -8C directly in the wind.	1 or 2C. Wind chill feeling like -10 to -15C.
<b>Freezing Level</b>	Above freezing to higher tops, but high terrain stays partly frozen.	Just above freezing on highest summits, icy surfaces on high tops.

**Planning Outlook****All mountain areas of Britain from Monday, 19 January, 2026**

South to southeasterly winds prevail into the new week, trending more easterly in Scotland, widely strengthening to become persistently windy, gales over mountains with powerful gusts. Mountains staying near to freezing point in Scotland, typically just above freezing to high tops in England and Wales for a few days. Initially weak fronts try to push in from the west bringing occasional rain and high-level snow, then some more persistent falls later in the week; generally driest in northwest Scotland. Colder air trying to move in from the east into later January, leaving most mountain terrain frozen in the longer range.

**Forecast issued at 15:30 on Saturday, 17 January, 2026**

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
