## General Summary for Monday, 2 February, 2026

### British Mountain Summary:

#### Based on forecast chart for noon 2 February, 2026

Strong and gusty east-southeasterlies, gale-force in places, speeds generally increasing over England & Wales with time. Snow frequent or persistent for eastern Scottish hills, rain lower ground; whiteout over higher areas with blanket cloud. Largely dry west coasts with higher and more broken cloud.

#### Headline for Eryri / Snowdonia National Park

Strong, gusty wind, becoming gales. Low cloud east, breaks west.

## Detailed Forecast for Monday, 2 February, 2026

<b>How windy? (On the summits)</b>	Easterly 30-35mph, slightly less just up to dawn, generally strengthening through day to 40-45mph, or 50-55mph by dusk, with increasingly powerful gusts.
<b>Effect of wind on you?</b>	<b>Strenuous to increasingly arduous walking conditions, buffeting gusts knocking you off balance, not just on higher terrain, in places through high passes and downslope. Significant wind chill.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Spotty light rain</b> Occasional spots of light rain drifting from the south, mostly affecting southern and eastern hills, local snow grains highest tops. Slopes near Anglesey may stay dry all day.
<b>Cloud on the hills?</b>	<b>Lowest and most persistent east, breaks west</b> Cloud covering much higher terrain above 500 to 700m inland, lowest bases east Wales to some lower slopes in morning. Higher bases westward with some breaks, slopes towards Cardigan Bay and Anglesey stay clearest.
<b>Chance of cloud free summits?</b>	<b>40% lowering to 20% east</b>
<b>Sunshine?</b> Air clarity (below cloud)	Glimpses of sun mostly west coastal areas, otherwise cloud, dull toward east. Generally good visibility west, poorer eastern hills.
<b>How Cold? (at 900m)</b>	Around 0C. Feeling like -12 to -15C in the wind.
<b>Freezing Level</b>	Close to freezing on higher tops above 900m; higher terrain frozen and icy. Dropping to 800m or slightly lower into evening.

## Eryri / Snowdonia National Park - Looking Ahead

	Tuesday 3 February	Wednesday 4 February
<b>How windy? (On the summits)</b>	East to southeasterly 30 to 40mph, likely strongest morning; very gusty in places, locally to some lower slopes in west.	South to southeasterly 20 to 30mph, gusty in places.
<b>Effect of wind on you?</b>	<b>Challenging conditions at least early in the day, frequent buffeting affecting balance; considerable wind chill.</b>	<b>Blustery, in places affecting comfortable walking around the higher mountains, considerable wind chill.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Local sleet or hill snow</b> Patchy snow or sleet, risk more persistent mainly mid Wales. Rain or sleet up to 500-600m, or higher near west coast.	<b>Early rain fades</b> Overnight rain, some sleet or wet snow on highest tops, tending to fade during morning. Odd rain showers may follow.
<b>Cloud on the hills?</b>	<b>Fairly extensive, higher west</b>  Covering most higher terrain, above 500-600m in east Wales, 600 to 800m further westwards, some breaks to upper slopes west of Snowdon/Yr Wyddfa group.	<b>Lowest in east, clearer west</b>  Covering hills across east and mid Wales much of day, to some mid-slopes. Higher bases westwards, breaks toward some tops nearer to coasts.
<b>Chance of cloud free summits?</b>	<b>30%</b>	<b>30%</b>
<b>Sunshine?</b> Air clarity (below cloud)	Largely overcast, dull, locally brighter toward west coast. Hazy, poor visibility in rain/snow.	Glimpses of sun may develop toward the west coast. Misty start east, visibility better west, mostly good below cloud.
<b>How Cold? (at 900m)</b>	0 or -1C, up to local +1C in west. Wind chill feeling like -7 to -10C.	1 or 2C, may rise slightly further. Wind chill feeling like -6 to -8C.
<b>Freezing Level</b>	Varied, 500m particularly eastern areas, but further west locally just above freezing point to some upper slopes.	Close to freezing on higher tops above 900m for a time, but likely lifting above freezing to all summits.

**Planning Outlook****All mountain areas of Britain from Tuesday, 3 February, 2026**

Easterly winds prevail this week, strong to gale force over many hills for sustained periods. Freezing levels will vary, but in the Highlands rarely above 800m away from the west coast, at times sub-zero from 400-500m upward. In England and Wales only occasionally dropping below 600m, and at times just above freezing to high tops. Further snow focused on eastern Scottish mountains, with additional accumulations and drifting; very little further west. Some periods of hill snow for England and Wales during midweek. Cold easterly patterns are expected to continue onward into mid February, though higher pressure to the north may see reduced precipitation amounts, always driest with highest cloud in west.

**Forecast issued at 16:26 on Sunday, 1 February, 2026**

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
