General Summary for Friday, 13 February, 2026

British Mountain Summary:

Based on forecast chart for noon 13 February, 2026

A change in the pattern as cold air will have extended south overnight. Nearly all mountain terrain frozen in Scotland whilst further south, particularly higher terrain progressively freezes. Patches of snow, at times persistent Wales, but otherwise total precipitation small.

Headline for Eryri / Snowdonia National Park

Terrain increasingly frozen; intermittent snow.

Detailed Forecast for Friday, 13 February, 2026

How windy? (On the summits)	Northeasterly, speeds varied. Widely around 30mph, but on western mountains a very gusty 35-45mph and in places powerful gusts lower slopes.
Effect of wind on you?	Gusty wind will make balance difficult (even on some lower slopes west Wales) and give considerable wind chill.
How wet? (Precipitation and its impact)	Intermittent snow A mix of steady snow, lasting a couple of hours or so, and particularly mid Wales heavier but briefer snow showers. Rain only valleys.
Cloud on the hills?	Extensive though slowly lifting and breaking Confidence low: cloud widely across the hills, locally below 300m morning. Slowly will tend to improve. At some stage in afternoon, may clear largely to above 750 to 900m.
Chance of cloud free summits?	10% tending to rise toward 60%
Sunshine? Air clarity (below cloud)	Mostly overcast. Very poor visibility in snow, improving as snow eases and cloud lifts.
How Cold? (at 900m)	-2 or -3C, trending colder with time. Will feel as cold as minus 16C in the wind.
Freezing Level	400m, although in morning, nearer 750m mid Wales before dropping from north. Most mountain terrain increasingly frozen.

Eryri / Snowdonia National Park - Looking Ahead

	Saturday 14 February	Sunday 15 February
How windy? (On the summits)	Northwest then west later southerly, initially 25mph before a prolonged lull of around 15mph. Strengthening pre-dusk.	Westerly 30 to sometimes 35 or 40mph.
Effect of wind on you?	Soon small but uncomfortable gusty wind early and late in the day (very difficult conditions into the night).	Significant wind chill and widely arduous walking on higher areas. Most gusty near showers when balance sometimes difficult.
How wet? (Precipitation and its impact)	Precipitation very unlikely Some light snow flurries may affect northern hills in the morning, but otherwise dry.	Hail and snow showers Overnight snow clearing at about dawn. Then occasional hail and snow showers, but mostly rain below 800m.
Cloud on the hills?	Many mountains free of cloud Mountains extensively free of cloud. From midday, increasing chance patches covering areas above 500 to 750m on westernmost mountains.	Frequently or persistently covering higher summits. Fog across the hills at dawn in precipitation. Will soon improve markedly as cloud base rises to 750-900m or above, albeit dropping again to around 400m near showers.
Chance of cloud free summits?	80%	30%
Sunshine? Air clarity (below cloud)	Extensive bright sunshine before high level cloud spreads eastward afternoon. Excellent or superb visibility.	Bursts of sunshine. Sometimes excellent visibility, but abruptly poor in precipitation.
How Cold? (at 900m)	-3C, rising a degree or so through afternoon.	Soon 2C. Will feel as close to minus 10C where exposed to the wind.
Freezing Level	550m, but most terrain widely frozen. Partial thawing lower, particularly sunlit slopes, through day.	Most terrain frozen, albeit freezing level soon 1000m or above with thaw commencing.

Planning Outlook**All mountain areas of Britain from Saturday, 14 February, 2026**

Widespread snow and severe upland gales Saturday night followed by very blustery showery conditions on Sunday - although a temporary thaw at least on lower slopes. Otherwise very much drier over the coming week. Bright sunshine and excellent visibility frequently on many mountain areas, although hail and snow showers in some areas with most upland areas frequently frozen.

Forecast issued at 12:55 on Thursday, 12 February, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
