## General Summary for Sunday, 15 February, 2026

### British Mountain Summary:

Based on forecast chart for noon 15 February, 2026

Overnight snow (considerable western Scotland north to Skye) will have cleared, leaving snow (rain lower slopes) showers in Scotland (driest toward east), whilst further south rain and snow on and off. Most mountain terrain will be frozen although thawing lower slopes.

### Headline for Eryri / Snowdonia National Park

Frozen largely terrain. Frequent rain or snow. Wind near gale force.

## Detailed Forecast for Sunday, 15 February, 2026

How windy? (On the summits)	Westerly 30 to sometimes 35mph, although 40mph for a few hours middle of day or afternoon.
Effect of wind on you?	<b>Significant wind chill and widely arduous walking on higher areas. Most gusty near showers when balance sometimes difficult.</b>
How wet? (Precipitation and its impact)	<b>Rain and snow; easing afternoon</b> Persistent snow clearing before dawn. Through day hail and snow showers - but over a few hours morning and middle of day the precipitation frequent or almost constant. Mostly rain below 800m.
Cloud on the hills?	<b>Frequently or persistently covering the mountains</b> Fog persistent across the hills most or all day; sometimes cloud below 300m though mostly above 500m east Wales. Will improve at times, mainly later afternoon as cloud base rises to 600m to perhaps 800m.
Chance of cloud free summits?	<b>Less than 10%</b>
Sunshine? Air clarity (below cloud)	Bursts of sunshine, mainly east Wales. Sometimes excellent visibility, but abruptly poor in precipitation.
How Cold? (at 900m)	Soon 2C. Will feel as close to minus 10C where exposed to the wind.
Freezing Level	Most terrain frozen, albeit freezing level soon 1000m or above with thaw commencing.

## Eryri / Snowdonia National Park - Looking Ahead

	Monday 16 February	Tuesday 17 February
<b>How windy? (On the summits)</b>	Westerly in the range 35 to 45mph.	Northerly high confidence in dropping to less than 15mph in a lull, but post dawn 15, possibly 25mph.
<b>Effect of wind on you?</b>	<b>Significant wind chill and walking arduous, sometimes balance difficult.</b>	<b>Becoming negligible</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Snow showers; sometimes frequent</b> Snow and hail showers, sometimes frequent and threat of the precipitation almost constant over a couple of hours. Mostly rain below 450m. Chance isolated thunder morning.	<b>Precipitation unlikely</b> Risk snow and hail showers over Irish Sea affecting Snowdon range at first, possibly until early afternoon.
<b>Cloud on the hills?</b>	<b>Extensive</b>  Cloud base varying, between 300m near precipitation and otherwise 500 to occasionally above 750m (generally highest base east Wales afternoon).	<b>Largely or all clearing</b>  By afternoon mountains largely or completely free of cloud. Earlier in day cloud may be extensive on higher slopes Snowdon range.
<b>Chance of cloud free summits?</b>	<b>20%</b>	<b>80% by afternoon</b>
<b>Sunshine?</b> Air clarity (below cloud)	Occasional sunshine - mainly lower slopes east Wales. Very varied visibility; very poor or appalling in snow, but otherwise excellent.	Bright sunshine increasingly. Excellent or superb visibility.
<b>How Cold? (at 900m)</b>	0 or -1C. Will feel around minus 14C directly in the wind.	-2C
<b>Freezing Level</b>	800m to 950m.	700m.

**Planning Outlook****All mountain areas of Britain from Monday, 16 February, 2026**

Persistently cold most mountain areas, particularly across Scotland next week. Further snow from time to time. England and particularly Wales will have intermittently higher freezing levels resulting in freeze-thaw cycles.

**Forecast issued at 12:12 on Saturday, 14 February, 2026**

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
