General Summary for Sunday, 22 February, 2026

British Mountain Summary:
Based on forecast chart for noon 22 February, 2026

Showery southwesterlies, extensively gale force over higher terrain with significant chill factor. Rain and hail, snow falling above 900m in Scotland, most frequent west coastal areas. Fewer showers eastward across Scotland and for England & Wales, with some cloud breaks toward tops.

Headline for Eryri / Snowdonia National Park

Windy, gales on tops. Showers mostly west.

Detailed Forecast for Sunday, 22 February, 2026

How windy? (On the summits)	Southwesterly 35 to 45mph, frequent squally gusts in showers, over 50mph on higher tops, tending to strengthen.
Effect of wind on you?	Challenging conditions over higher terrain, frequent buffeting making walking arduous in exposure. Significant wind chill.
How wet? (Precipitation and its impact)	Occasional showers Remnants of overnight rain leaving some showery rain around dawn. Then a few showers, most common toward west coast, briefly heavier. Toward dusk into evening, greater risk more frequent heavier showery rain.
Cloud on the hills?	Often covering higher areas Covering western mountains above 700-800m most of the time, briefly lowering around showers. Occasional breaks higher up, best well inland and east.
Chance of cloud free summits?	30%
Sunshine? Air clarity (below cloud)	Glimpses of sun, mostly toward east. Visibility at times very good, but reduced to occasionally poor in showers.
How Cold? (at 900m)	3C. Wind chill feeling like -10 to -13C on tops.
Freezing Level	Above the summits.

Eryri / Snowdonia National Park - Looking Ahead

	Monday 23 February	Tuesday 24 February
How windy? (On the summits) Effect of wind on you?	Southwesterly 35 to 45mph, lowest speeds likely middle of day, then increasing again up to 50mph toward Arduous walking conditions much of day, gusts knocking you off balance in exposure. Significant wind chill.	Southwesterly 40 to 50mph. Challenging conditions, frequent buffeting knocking you off balance in exposure. Considerable wind chill despite milder air.
How wet? (Precipitation and its impact)	Rain may set in west Rain on and off, persistently drizzly at least western hills, but likely setting in for more constant rain for several hours during day.	Drizzle west Drizzle mostly areas toward west of Yr Wyddfa / Snowdon group and onto Llyn peninsula. Damp where in cloud elsewhere. Drier east Wales.
Cloud on the hills?	Extensive low cloud Likely to cover the mountains all day from mid-elevations upward, or lower toward west coast. Some breaks above 700m well inland and mainly further east.	Most persistent west coast Low cloud likely to cover west coastal areas, to some lower slopes. Mostly above 700m north from Ogwen and eastern hills.
Chance of cloud free summits?	10%	20%
Sunshine? Air clarity (below cloud)	Largely cloudy, hazy or increasingly murky west in rain. Some brighter moments in east with good visibility for a time.	Largely cloudy, murky toward Cardigan Bay, locally better visibility north and eastward.
How Cold? (at 900m) Freezing Level	3C, rising slightly afternoon onward. Feeling like -10 to -13C directly in the wind. Above the summits.	4 to 6C. In exposure to wind, feeling like -7 to -10C. Above all summits.

Planning Outlook

All mountain areas of Britain from Monday, 23 February, 2026

West to southwesterly winds prevail during the week ahead as areas of low pressure move toward northwest Scotland whilst ridges of higher pressure occasionally nudge across southern Britain. Sustained gales over the mountains, only brief lulls. Temperatures will fluctuate above and below freezing on higher Scottish mountains, with periods of thaw and refreezing. England and Wales generally above freezing to tops with a substantial thaw of most upland snow. Frequent rainfall, often heavy over western mountains, at times showery with hail, some snow on Scottish Munros. The final days of February favour colder northwesterly air and a drop of freezing level.

Forecast issued at 16:00 on Saturday, 21 February, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
