General Summary for Friday, 20 March, 2026

British Mountain Summary:
Based on forecast chart for noon 20 March, 2026

Southwesterly winds over the Highlands will be gusty in places, strongest toward far northwest where locally up to gale-force. Cloud banks near Scottish west coast, otherwise largely clear with strong early spring sunshine, beware sunburn. Early areas of fog clearing. Light winds England and Wales.

Headline for Eryri / Snowdonia National Park

Light winds. Warm sunshine.

Detailed Forecast for Friday, 20 March, 2026

| | |
|--|--|
| How windy? (On the summits) | Easterly or variable 10mph or less. |
| Effect of wind on you? | Small. |
| How wet? (Precipitation and its impact) | Precipitation not expected |
| Cloud on the hills? | Hills clear, early low fog east Patchy fog in valleys from dawn, briefly lifting onto some hill slopes for a time in eastern areas, but all dispersing by middle of day. |
| Chance of cloud free summits? | Practically certain. |
| Sunshine? Air clarity (below cloud) | Sun and thin high cloud. Visibility excellent on hills, some haze lower down. |
| How Cold? (at 900m) | 6 to 8C, some cooler spots at first, then some slightly warmer spots by afternoon. |
| Freezing Level | Above the summits, but slight frost in valleys and some sheltered higher areas at dawn. |

Eryri / Snowdonia National Park - Looking Ahead

| | Saturday 21 March | Sunday 22 March |
|--|---|---|
| How windy? (On the summits) Effect of wind on you? | Variable 10mph or less. Negligible. | Westerly or variable, 15 to 20mph, may be variable lower speeds for periods toward mid-Wales. Fairly small. |
| How wet? (Precipitation and its impact) | Precipitation not expected | Rare if any rain Chance of a few spots of rain as high cloud thickens, mainly into the afternoon. |
| Cloud on the hills? Chance of cloud free summits? | Early low-level fog clearing Fog mostly confined to valleys in the morning, some patches briefly rising upslope, mainly eastern hills, otherwise the mountains clear. Above 90% | Early fog clearing, patchy cloud west Some areas of fog in valleys and lower hill slopes in the morning, briefly drifting upslope, but clearing to leave clear hills. Occasional cloud caps drift over higher tops in northwest, may fill in later. 70% |
| Sunshine? Air clarity (below cloud) | Mostly sunny, thin high cloud. Hazy views. | Mostly sunny morning, giving way to some thickening high cloud from northwest, may become more overcast with time. Visibility good, but some haze. |
| How Cold? (at 900m) Freezing Level | 7C, rising slightly into afternoon. Above the summits, but patchy frost in valleys and sheltered higher areas around dawn. | 5 to 7C, likely warmest in morning. Above the summits. Slight frost inland valleys at dawn. |

Planning Outlook**All mountain areas of Britain from Saturday, 21 March, 2026**

High pressure slowly retreats over the weekend to allow west-southwesterly winds to move into Scotland, bringing more cloud to the northwest and some drizzle on Saturday, though most places remain dry. By Sunday, stronger westerly winds and a front passing eastwards with a spell of rain followed by lowering temperatures and showers with snow and hail over the hills in Scotland. A chilly start to the new week, near or below freezing over higher mountains, particularly Scotland. Changeable westerlies during next week, windy for all at times, showery conditions most common in western Scotland. High pressure to the south rebuilds at times to settle things again.

Forecast issued at 15:00 on Thursday, 19 March, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
