## General Summary for Thursday, 16 July, 2026

### British Mountain Summary:

#### Based on forecast chart for noon 16 July, 2026

Extremely dry ground conditions with risk of wildfire, notably England and Wales. Remaining very warm and mostly sunny across the country, high cloud and haze weakening the sun in the north. Early sea fog affects low slopes of north and east Scotland and England, this burning off through morning.

### Headline for Eryri / Snowdonia National Park

Very warm sun; dry ground with fire risk

## Detailed Forecast for Thursday, 16 July, 2026

|                                                   |                                                                                                                                                 |
|---------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b>                | Easterly, later northeasterly; 5-15mph, some gusty areas to 20mph mainly early and late in the day, including down to lower slopes to the west. |
| <b>Effect of wind on you?</b>                     | Fairly small, but some more noticeable gustier spots at times.                                                                                  |
| <b>How wet?</b><br>(Precipitation and its impact) | No rain expected                                                                                                                                |
| <b>Cloud on the hills?</b>                        | <b>Hills clear</b><br>Any patchy cloud on easternmost hills at first soon dispersing.                                                           |
| <b>Chance of cloud free summits?</b>              | <b>Practically certain</b>                                                                                                                      |
| <b>Sunshine?</b><br>Air clarity (below cloud)     | Sunshine over the hills dawn til dusk, though sometimes weakened by high cloud. Visibility very good, a light haze.                             |
| <b>How Cold? (at 900m)</b>                        | 15C from dawn (valleys slightly cooler at dawn), rising to 19C (valleys reach 27C).                                                             |
| <b>Freezing Level</b>                             | Above the summits.                                                                                                                              |

|                                                                         | Friday 17 July                                                                                                                       | Saturday 18 July                                                                                                                                                                                                  |
|-------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b><br><br><b>Effect of wind on you?</b> | North to northeasterly 10 to 20mph, strongest over tops in Snowdon/Yr Wyddfa area and on Llyn peninsula.<br><br><b>Mostly small.</b> | Northerly, some variability, 10-20mph; quite gusty in the morning.<br><br><b>Fairly small, some nuisance gusts.</b>                                                                                               |
| <b>How wet?</b><br>(Precipitation and its impact)                       | <b>No rain expected</b>                                                                                                              | <b>Chace scattered showers</b><br><br>Showers breaking out here and there, light in nature and highly regional; many hills stay dry.                                                                              |
| <b>Cloud on the hills?</b>                                              | <b>Hills clear</b><br><br>Remote chance of an odd patch of cloud drifting onto northern slopes.                                      | <b>Little expected</b><br><br>Patchy mist on middle and low slopes early, this lifting and mostly dissipating soon after dawn. A few banks may occasionally drift over high northern terrain but otherwise clear. |
| <b>Chance of cloud free summits?</b>                                    | <b>Nearly certain</b>                                                                                                                | <b>90%</b>                                                                                                                                                                                                        |
| <b>Sunshine?</b><br>Air clarity (below cloud)                           | Sunshine and thin high cloud.<br>Visibility good though a slight haze.                                                               | A patchwork of cloud and sunshine.<br>A light haze, visibility becomes very good to the east.                                                                                                                     |
| <b>How Cold? (at 900m)</b><br><br><b>Freezing Level</b>                 | 15C from dawn, small rise to 17C; northernmost hills see little or no rise.<br><br>Above the summits.                                | 12 to 14C, coolest Carneddau to Llanberis where little or no rise in temperature.<br><br>Above the summits.                                                                                                       |

## Planning Outlook

## All mountain areas of Britain from Friday, 17 July, 2026

Settled summer weather continues into the weekend and next week as high pressure dominates. Warm temperatures on the hills in midweek will trend cooler from the north from Friday into the weekend, dropping below 10C on summits for periods, mainly Scottish mountains. Most persistently cooler in the north where some cloud will be drawn onto high terrain and over tops at times, occasional light showery rain; occasional inversion conditions in the morning. Otherwise generally ongoing dry weather, with good amounts of sun and many hill tops often clear of cloud. Continuing very high risk of fire with extremely dry ground conditions. A change of weather pattern late in the month brings scope for rain and thundery showers.

**Forecast issued at 15:59 on Wednesday, 15 July, 2026**

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
