## General Summary for Thursday, 23 July, 2026

### British Mountain Summary:

#### Based on forecast chart for noon 23 July, 2026

Low cloud and drizzle across the northern parts of the Highlands in the morning, cloud tending to lift for central-southern Highlands, but northwestern areas stay damp, more persistent rain later and winds also strengthening. Cloudy skies for England and Wales, most hills clearing in the morning, low risk of a shower.

### Headline for Eryri / Snowdonia National Park

Light-moderate breeze. Largely dry, cloud lifts above hills.

## Detailed Forecast for Thursday, 23 July, 2026

|                                                   |                                                                                                                                                                                                                          |
|---------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b>                | Northwesterly 10 to 15mph, often less toward mid-Wales. Tending to increase into evening-night to 20-25mph.                                                                                                              |
| <b>Effect of wind on you?</b>                     | Small during day.                                                                                                                                                                                                        |
| <b>How wet?</b><br>(Precipitation and its impact) | <b>Generally dry</b><br>Odd pockets of fine drizzle some northern slopes around early cloud.<br>Small chance a brief light shower mainly inland afternoon.                                                               |
| <b>Cloud on the hills?</b>                        | <b>Patchy cloud lifting and breaking</b><br>Local mist in valleys, patchy cloud banks from dawn, soon mostly above 700m. Cloud base rising toward then above most higher summits by midday, odd patches above 900-1000m. |
| <b>Chance of cloud free summits?</b>              | <b>60% rising to 80%</b>                                                                                                                                                                                                 |
| <b>Sunshine?</b><br>Air clarity (below cloud)     | Patchwork of cloud and sun, cloudier start toward north coasts, then sun breaking through best toward all coasts in the afternoon. Visibility increasingly very good.                                                    |
| <b>How Cold? (at 900m)</b>                        | 10 to 12C, only slight rise Yr Wyddfa / Snowdon group, reaching 16C mid-Wales.                                                                                                                                           |
| <b>Freezing Level</b>                             | Above the summits.                                                                                                                                                                                                       |

## Planning Outlook

## All mountain areas of Britain from Friday, 24 July, 2026

Westerly winds reaching gale-force over Scottish tops on Friday; low cloud across western Scotland, drizzle and steadier light rain, turning heavier later in the day. A swathe of persistent rain and strong winds moving southwards across Britain into Saturday, leaving a legacy of showers for Scotland, winds tending to lessen. Further areas of showers into Sunday. A changeable west to southwesterly pattern into next week and likely into early August, bringing spells of rain and showers; varying wind speeds, strengthening at times to gales on high tops. Often cooler for Scotland, a mix of cooler and warmer days for England & Wales.
