General Summary for Wednesday, 4 November, 2026

British Mountain Summary:
Based on forecast chart for noon 4 November, 2026

High pressure will remain centred near N Scotland. Areas of cloud, and here and there (mainly N England) a little rain will circulate around the high - sometimes the top of the cloud below higher summits in Scotland. Gusty winds Wales, progressively light wind north into Scotland.

Headline for Eryri / Snowdonia National Park

Mostly cloudy; a little light rain here and there. Gusty wind.

Detailed Forecast for Wednesday, 4 November, 2026

How windy? (On the summits)	Easterly 30 to 40mph, very gusty in places around some tops, elevated passes and locally lower slopes west of major ridges and summits.
Effect of wind on you?	**Affecting comfortable walking on higher slopes, buffeting gusts in places making balance tricky. Considerable wind chill.**
How wet? (Precipitation and its impact)	**Largely dry; a little showery rain, mainly east Wales** Showery but mostly light rain rarely; total rainfall very small - much of west Wales dry.
Cloud on the hills?	**Cloud base varying, lowest cloud base east Wales** Particularly near rain, cloud base sometimes below 500m east Wales, but otherwise cloud base between 700 and 1000m. The cloud may break up completely for periods west Wales.
Chance of cloud free summits?	**60%**
Sunshine? Air clarity (below cloud)	Ranging from intermittent sunshine west Wales to cloudy or often cloudy east Wales. Visibility very good or excellent.
How Cold? (at 900m)	2 or 3C. Feeling as cold as minus 6C directly in the wind.
Freezing Level	Close to freezing on highest summits.

Eryri / Snowdonia National Park - Looking Ahead

	Thursday 5 November	Friday 6 November
How windy? (On the summits)	Easterly 30 to 40mph, very gusty around tops, high passes and in places downslope to west; may ease a little	Easterly, 20mph or in morning perhaps 25mph some higher areas Snowdon range. Will tend to ease through day.
Effect of wind on you?	**Strenuous walking over the hills, sudden buffeting in places including to some lower elevations; significant wind chill.**	**Fairly small**
How wet? (Precipitation and its impact)	**Little or perhaps no rain** Rare spots in the wind, mostly northern hills east from the Carneddau.	**Little or no rain.** Most possibly all areas dry. But a little damp weather with pockets of very light rain will come and go across mainly east Wales and Carneddau
Cloud on the hills?	**May be persistent northernmost hills** Patchy cloud drifting over some tops mainly in the morning and mostly Carneddau to Bala and Berwyn groups, base around 600m, or by midday mostly near or above 900m. Well broken westwards, many hills often clear.	**Extensive, particularly more eastern hills** Broadly, cloud base will rise westwards and through the day. Particularly in rain, pockets of or extensive cloud lower slopes east Wales, where base 450m or above by midday. Cloud mostly above 750m western hills.
Chance of cloud free summits?	**70%**	**20%**
Sunshine? Air clarity (below cloud)	Sunshine particularly toward west coast. May frequently be cloudy eastern hills. Visibility very good.	Occasional sunshine, mainly west Wales. Good visibility, but misty in rain
How Cold? (at 900m)	3C. Feeling near -10C directly in the wind.	2C
Freezing Level	Above the summits.	Above the summits.

Planning Outlook

All mountain areas of Britain from Thursday, 5 November, 2026

High pressure will be the main influence through the next week, particularly in Scotland where extensively dry and wind often light. Over England and Wales, the weekend may be 'disappointing' as after a little rain, low cloud and mist may well predominate under light wind. Nevertheless some mountains may clear.

Forecast issued at 7:31 on Wednesday, 4 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
