General Summary for Sunday, 8 November, 2026

British Mountain Summary:
Based on forecast chart for noon 8 November, 2026

Patchy drizzle and areas of low cloud or fog, mostly east and southern Scotland, Pennines and inland across Wales, whilst western regions tend to fare better for cloud breaks and some sun. Very little wind overall. Near freezing on highest Scottish tops.

Headline for Eryri / Snowdonia National Park

Varied cloud and fog, likely clearer west, some sun.

Detailed Forecast for Sunday, 8 November, 2026

How windy? (On the summits)	Direction varied 10mph or less.
Effect of wind on you?	**Negligible**
How wet? (Precipitation and its impact)	**Patchy drizzle** Local pockets of light drizzle. Possibly an odd light shower nearest to coasts.
Cloud on the hills?	**Extensive; cloud base sometimes very different on nearby slopes** Some local variations, but cloud likely extensive highest slopes. Lower down, fog clinging to many slopes from valleys up most or all day, whilst others are or become fog free or are between layers of cloud. Tending to improve with fog thinning afternoon. Generally better toward coastal hills.
Chance of cloud free summits?	**20%**
Sunshine? Air clarity (below cloud)	Varied cloud or fog - some areas brighter with glimpses of sun developing through day, likely better coasts; some haze remains lower down.
How Cold? (at 900m)	4C
Freezing Level	Above the summits. Local pockets of slight frost inland valleys early morning.

Eryri / Snowdonia National Park - Looking Ahead

	Monday 9 November	Tuesday 10 November
How windy? (On the summits) **Effect of wind on you?**	East-southeasterly 15mph at first, rising during day to 20mph, reaching 25mph and increasingly gusty from dusk onward. **Fairly small, but becoming more noticeable as the day goes on.**	Southeasterly 25 to 35mph, gusty in places around major summits, high passes and some western downslopes. **Strenuous walking in exposure, gusty areas making balance difficult at times. Considerable wind chill.**
How wet? (Precipitation and its impact)	**No rain expected** Locally feeling damp where in fog, mainly east Wales.	**Risk of rain developing widely** Some uncertainty of timing, but rain likely moving gradually northwards across the region. Likely patchy small amounts toward northwest, but may become more persistent mid-Wales.
Cloud on the hills? **Chance of cloud free summits?**	**Low cloud or fog mostly east** Areas of fog from lower elevations up in the morning toward east Wales, also some cloud banks drifting over high terrain. Overall better breaks and clearer hills further westwards, perhaps very little cloud much of the west coast. **60%**	**Most persistent south** Likely to cover much high terrain, but locally varied - typically lowest and most extensive over east and mid-Wales, whilst further toward the northwest some breaks may occur to some upper slopes. **30%**
Sunshine? Air clarity (below cloud)	Sun mainly in the west, a thin veil of high cloud; local very good visibility west; further east more likely hazy or foggy.	Fairly cloudy, locally brighter northwest, but little if any sun. Visibility good if dry, but poor in rain.
How Cold? (at 900m) **Freezing Level**	4C, slight rise toward west. Feeling below freezing as wind increases. Above the summits. Local frost pockets in sheltered valleys around dawn.	5C. Feeling like -5C directly in the wind. Above the summits.

Planning Outlook

All mountain areas of Britain from Monday, 9 November, 2026

A slack pressure pattern to start the new week over Scotland, maintaining varied low cloud and fog. Lowering pressure to the south and an increasing easterly wind for England & Wales. Rain pushes into Wales on Tuesday, reaching the south Pennines with time, persisting in these areas into Wednesday, but very little extending further northwards. Into the second half of the week, a switch to a colder northerly flow will likely drop the freezing level to 800m increasingly widely for Thursday-Friday, plus frost on low ground. Some snow showers on northern Scottish mountains, but largely dry weather elsewhere. During next weekend, a shift to a less cold Atlantic influence - a changeable mix likely into the following week.

Forecast issued at 15:00 on Saturday, 7 November, 2026
