General Summary for Wednesday, 11 November, 2026

British Mountain Summary:
Based on forecast chart for noon 11 November, 2026

Many places stay dry all day with sunshine and broken cloud. Below freezing on Scottish tops. A band of rain and hill snow moves into northern Scotland during the day, plus a strengthening northwesterly wind. Easterly winds for Wales, light rain in the south fizzles out, but leaves low cloud and dampness.

Headline for Eryri / Snowdonia National Park

Gusty wind; largely dry, cloud thinning, clearer west.

Detailed Forecast for Wednesday, 11 November, 2026

How windy? (On the summits)	Easterly 20 to 30mph, typically strongest in mid Wales, stronger gusts in places around tops, passes and locally to some lower slopes; easing a little during the day.
Effect of wind on you?	**Affecting comfortable walking on exposed terrain, variable gusts but lessening. Marked wind chill.**
How wet? (Precipitation and its impact)	**A little rain mainly mid Wales in morning** Patchy light rain mostly toward mid Wales from before dawn into early morning, will break up and fizzle out before middle of day. Largely dry all day northwestern mountains around the wider Snowdon group.
Cloud on the hills?	**Mostly eastern hills, little northwest** Banks of cloud lowest and most persistent toward mid Wales and the Bala-Berwyn group in the morning, thinning gradually into afternoon. Further north/west, the cloud base higher and patchier, mostly around Carneddau for a few hours, but increasingly clearing.
Chance of cloud free summits?	**20% rising to 50% east/mid Wales, 70% much of day northwest.**
Sunshine? Air clarity (below cloud)	A veil of cloud thins from the north to allow sun to break through, mainly western areas. Poor visibility where in early cloud and rain mid-Wales, but very good northwest.
How Cold? (at 900m)	2 or 3C. Feeling like -5 to -8C directly in the stronger wind.
Freezing Level	Above the summits.

Eryri / Snowdonia National Park - Looking Ahead

	Thursday 12 November	Friday 13 November
How windy? (On the summits)	Northerly 20 to 30mph.	North-northwesterly, 15mph or likely dropping less during the day.
Effect of wind on you?	**Affecting comfortable walking on exposed high terrain, gusts may affect balance. Considerable wind chill.**	**Mostly small.**
How wet? (Precipitation and its impact)	**Showers in north for a time** Occasional brief showers drifting onto coastal hills from the north in the morning, snow flurries above 600m.	**Substantially dry** Chance of an odd light shower drifting onto coastal areas near Llyn peninsula.
Cloud on the hills?	**Grazing tops at times** Occasional patches cap higher slopes from time to time, mainly areas facing north nearer the coasts.	**Mostly little if any** Some patchy cloud occasionally drifting onto upper slopes of Carneddau and Snowdon group, but often clearing. Very little if any cloud further south and east.
Chance of cloud free summits?	**80%**	**80%**
Sunshine? Air clarity (below cloud)	Mostly sunny, a little patchy cloud toward coasts. Visibility excellent.	Mostly sunny, some patchy cloud near to coasts in northwest. Visibility excellent.
How Cold? (at 900m)	-1C. Feeling like -10C directly in the wind.	0 or -1C.
Freezing Level	800m, or slightly higher near coast. Also frost many inland valleys in morning.	Around 800-900m, but frost widely in valleys in morning, in places all day inland out of sunlight.

Planning Outlook

All mountain areas of Britain from Thursday, 12 November, 2026

Chillier in the second half of this week with frost widely, but much clearer conditions for all with sunshine. Into the weekend, as the wind shifts west then southwesterly, less cold air drifts in from the Atlantic bringing more cloud onto western hills - some rain mainly in western Scotland, whilst England and Wales may remain largely dry for the weekend. A changeable outlook into next week with varying temperatures, stronger wind at times, rain and some upland snow possible. Unsettled patterns are more likely to prevail beyond mid-month.

Forecast issued at 15:25 on Tuesday, 10 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
