General Summary for Monday, 23 November, 2026

British Mountain Summary:
Based on forecast chart for noon 23 November, 2026

A largely fine day but a chilly southeasterly breeze - windier near west coasts. Sunniest northern Scotland. Remnants of a front toward west - some patchy cloud on southern hill groups in Scotland; some lower fog / cloud banks south Wales. Deteriorating from southwest into night.

Headline for Eryri / Snowdonia National Park

Sunshine, some patchy cloud, light-moderate breeze.

Detailed Forecast for Monday, 23 November, 2026

How windy? (On the summits)	Southerly 15 to 20mph or at times less. Shifting southwesterly toward and after dusk, rising to 30mph into evening, then by midnight onward over 40mph.
Effect of wind on you?	**Fairly small much of day.** **Deteriorating into the night.**
How wet? (Precipitation and its impact)	**Precipitation rare if any until night** Odd light spots possible near to Llyn peninsula, otherwise very likely dry. Into the evening, light rain develops from southwest to become more persistent rain into first part of night, briefly snow on tops.
Cloud on the hills?	**Mostly little** Some patchy cloud banks may drift around various hill slopes for a time, mainly west; locally fog into some inland valleys in morning, but many northern mountains often clear.
Chance of cloud free summits?	**70%, to 90% north.**
Sunshine? Air clarity (below cloud)	Periods of sunshine often weak, mixed with varying high cloud. Hazy, particularly east Wales; mostly very good visibility northwest areas.
How Cold? (at 900m)	1C.
Freezing Level	Close to freezing point on highest summits.

Eryri / Snowdonia National Park - Looking Ahead

	Tuesday 24 November	Wednesday 25 November
How windy? (On the summits) **Effect of wind on you?**	South to southeasterly, strengthening quickly with height a very gusty 45-65mph. Ferocious gusts; some **Severe wind chill and very difficult walking where exposed. Gusts may well knock you over - even on some lower slopes.**	Easterly 20 to 25mph, may increase over 30mph in gusts at least around higher tops and some western downslopes. **Starting to affect ease of walking on exposed terrain with considerable wind chill, gusty not just on tops.**
How wet? (Precipitation and its impact)	**Rain most or all day** A broad area of rain will extend eastwards during morning and last throughout the day, heaviest over western mountains near and on the Llyn peninsula.	**Some early sleet, fading** Remnants of overnight sleet, snow tops, may continue on some hills in the morning, rain lower slopes. Tending to fade to become patchy, odd brief flurries in east.
Cloud on the hills? **Chance of cloud free summits?**	**Very extensive.** Cloud base extensively 300-500m, but mostly 600m Snowdon range northward. **20%**	**Mostly east, breaks west** Varying cloud banks across many hills in the morning, may persist over eastern hills, but tending to thin westwards and breaks more likely west coast and Llyn peninsula. **30%**
Sunshine? Air clarity (below cloud)	Sunshine unlikely. Widely misty or murky.	Little if any weak sun due to layers of high cloud. Visibility very good where dry, poorer in early sleet/snow.
How Cold? (at 900m) **Freezing Level**	2 or 3C. Will feel as cold as minus 12C in the wind. Above the summits.	0 to 2C, small change with height above around 500m; slightly warmer west. Feeling near -10C if in stronger wind. Poorly defined with much upland terrain partly frozen above 500m, but also slight frost mainly inland valleys in morning.

Planning Outlook

All mountain areas of Britain from Tuesday, 24 November, 2026

Staying near or below freezing across most mountains with below-average temperatures for late November, much higher terrain persistently frozen and regular frosts into valleys and glens. Some rain, sleet and hill snow on Tuesday as a front drifts in from the west, but then fizzles out into Wednesday. East or southeasterly winds prevail into midweek and beyond, with snow flurries focused on more southeastern hill groups in the Highlands, at times the Borders and Pennine areas. In the extended outlook toward next weekend and beyond, there is uncertainty about the extent of incoming Atlantic fronts and scope for further snowfalls, or any pushes of milder air trying to arrive. A more 'blocked' chillier easterly driven weather regime may well prevail into early December.

Forecast issued at 15:01 on Sunday, 22 November, 2026
